

SUPERIOR COURT OF THE STATE OF CALIFORNIA
COUNTY OF LOS ANGELES

SANTA BARBARA CHANNELKEEPER,
a California non-profit corporation,

Petitioner,

v.

STATE WATER RESOURCES
CONTROL BOARD, a California State
Agency; et al.,

Respondents.

CITY OF SAN BUENAVENTURA, a
California municipal corporation,

Cross-Complainant,

v.

DUNCAN ABBOTT, an individual; et al.

Cross-Defendants.

Case No. 19STCP01176
Judge: The Honorable William F. Highberger

[PROPOSED] STIPULATED PHYSICAL
SOLUTION AND JUDGMENT

Action Filed: September 19, 2014
Trial Date: Not Set

1 [PROPOSED] STIPULATED PHYSICAL SOLUTION AND JUDGMENT

2
3 Certain **Parties**¹ to this **Action** have stipulated to entry of this **Physical Solution** and
4 **Judgment** (“Physical Solution”). The stipulation of the Parties is conditioned on further
5 proceedings that will result in the Physical Solution becoming binding on all **Bound Parties** in
6 this Action. The Court, having exercised its constitutional duty to evaluate a physical solution,
7 considered the pleadings, the stipulation of the Parties, the evidence presented, and based on the
8 findings of fact and conclusions of law set forth below, approves the Physical Solution² and
9 enters this Judgment that imposes the Physical Solution in furtherance of the requirements of
10 Article X, section 2 of the California Constitution. In imposing the Physical Solution, the Court
11 has determined that the Physical Solution optimizes the reasonable and beneficial use of water in
12 the Ventura River Watershed and avoids substantial injury, material expense, and unnecessary
13 waste of precious water resources in a manner protective of public trust resources, that it is
14 consistent with Code of Civil Procedure sections 830-852, as applicable, and that it conforms
15 with California water law and policy, including because it preserves the continuing jurisdiction of
16 the Court to enforce the Physical Solution and to address future disputes, if necessary. This
17 Physical Solution does not determine water rights or directly limit water **Production**. Instead, it
18 creates a specific plan to manage the Watershed to protect existing reasonable and beneficial uses
19

20

¹ A list of defined terms used herein is attached hereto as Exhibit A. For ease of reference, defined terms are placed
in initial capitals, and bolded when defined.

21 ² A “physical solution” describes an agreed upon or judicially-imposed resolution of conflicting claims in a manner
that advances the constitutional rule of reasonable and beneficial use of the state’s water supply. (*City of Santa Maria
v. Adam* (2012) 211 Cal.App.4th 266, 288.) It is defined as both a defense to the issuance of an injunction (*Tulare
Irrigation District v. Lindsay-Strathmore Irrigation District* (1935) 3 Cal.2d 489, 574, 579; *Rancho Santa Margarita
v. Vail* (1938) 11 Cal.2d 501, 556) and as “an equitable remedy designed to alleviate overdrafts
and the consequential depletion of water resources in a particular area, consistent with the constitutional mandate to
prevent waste and unreasonable water use and to maximize the beneficial use of this state’s limited resource.”
(*California American Water v. City of Seaside* (2010) 183 Cal.App.4th 471, 480.) Physical solutions need not
allocate water rights if a dispute as to water right priorities is mooted by the implementation of practical measures,
such as ensuring downstream water users are not adversely affected by upstream use, raising money to improve the
watershed or import water, and encouraging local water conservation. (*City of Barstow v. Mojave Water Agency*
(2000) 23 Cal.4th 1224, 1235.) A physical solution is thus a practical remedy that does not change vested rights. (*Id.*
at p. 1250.) The “established practice” of reserving continuing jurisdiction enables the Court to address water rights
issues, if and when required. (*Hillside Memorial Park & Mortuary v. Golden State Water Co.* (2011) 199
Cal.App.4th 658, 671.)

1 of the water within the Watershed. The Physical Solution is hereby entered as binding on all
2 Parties to the Action, on certain parcels within the Watershed identified herein, and on all
3 **Persons** appearing in this Action, including, without limitation, being binding on all Parties who
4 have stipulated to this Physical Solution, on all Parties who are subject to prior settlement(s) or
5 judgment(s) of the Court, on all real property overlying the **Groundwater** basins in the Ventura
6 River Watershed, on all Parties who have defaulted, and on all Persons who hereafter stipulate or
7 otherwise become Parties to this Physical Solution. The Physical Solution is also binding on all
8 named **Cross-Defendants** owning real property adjoining or abutting the waters of the Ventura
9 River or its tributaries, whether flowing on the surface or underground in a known and defined
10 channel and their successors and on all real property overlying one or more of the following four
11 Groundwater basins that are subject to the Physical Solution: the **Lower Ventura River Basin**,
12 the **Upper Ventura River Basin**, the **Ojai Valley Basin**, and the **Upper Ojai Valley Basin**
13 (collectively, "**Basins**"). The Physical Solution is also an in rem judgment binding all real
14 property overlying the Basins. All Parties, Persons, and properties listed above as bound by this
15 Physical Solution are referred to herein as "Bound Parties."

16

17 Based on the findings of fact and conclusions of law contained in this Physical Solution,
18 the Court determines that the imposition of the Physical Solution is required to implement the
19 mandate of Article X, section 2 of the California Constitution in a manner that does not cause
20 substantial injury to water right holders, is consistent with the public trust doctrine, and Code of
21 Civil Procedure section 849 because it preserves and protects all reasonable and beneficial uses of
22 water of the Ventura River Watershed and reasonably balances the needs of public trust resources
23 with the consumptive use needs of people, agriculture, and industry while establishing and
24 implementing actions to maintain the **Fishery in Good Condition**. The Physical Solution
25 establishes a long-term management plan that accounts for: the specific needs of the Fishery,
26 variable hydrology of the region, periods of low and very low precipitation, and the condition and
27 quality of the habitat during the lifecycle of the Fishery, including the specific reach habitat
28 requirements pertinent to that lifecycle, and thereby ensures the viability of the Fishery through a

1 series of coordinated management actions under a **Management Plan**. Collectively, these
2 management actions undertaken by the Parties will concurrently preserve public trust resources
3 and provide a continued water supply for the thousands of people, farms, and businesses that rely
4 on the Ventura River Watershed for water.

5

6 **1. DESCRIPTION OF LITIGATION**

7 **1.1 Initiation of Litigation**

8 In September of 2014, Plaintiff Santa Barbara Channelkeeper (“**Channelkeeper**”) filed a
9 Complaint and Petition for Declaratory Relief and a Writ of Mandate (“**Complaint**”) pursuant to
10 Code of Civil Procedure section 1085 in the County of San Francisco Superior Court (Case No.
11 CPF-14-513875) against Defendant and Cross-Complainant City of San Buenaventura (“**City**”)
12 and Respondent State Water Resources Control Board (“**State Board**”). Channelkeeper asked
13 the Court to declare that the City’s extraction of water from Reach 4 of the Ventura River from
14 April through October is unreasonable, in violation of Article X, section 2 of the California
15 Constitution and to direct the State Board to perform alleged mandatory duties under Article X,
16 section 2, Water Code section 275, and the public trust doctrine, to prevent that alleged
17 unreasonable use by the City.

18

19 In response to the Complaint, the City filed a Cross-Complaint, and later a First Amended
20 Cross-Complaint, against other surface water and Groundwater users in the Ventura River
21 Watershed who it alleged affect the flow of water in the Ventura River. As used herein, the
22 **Ventura River Watershed or Watershed** includes the entire Ventura River and its tributaries, as
23 well as the Basins. Channelkeeper moved to strike the City’s First Amended Cross-Complaint,
24 and the San Francisco Superior Court granted the motion.

25

26

27

28

1 **1.2 Appeal and Court of Appeal Decision**

2 The City appealed the decision to strike its First Amended Cross-Complaint. On January
3 30, 2018, the Court of Appeal, First Appellate District, Division Two, reversed the San Francisco
4 Superior Court's decision and remanded the matter in *Santa Barbara Channelkeeper v. City of*
5 *San Buenaventura* (2018) 19 Cal.App.5th 1176.

6

7 **1.3 Amended Pleadings and Transfer of Venue**

8 Following the Court of Appeal's decision, Channelkeeper filed a First Amended
9 Complaint and Petition ("Amended Complaint"), and the City filed a Second Amended Cross-
10 Complaint. The Amended Complaint alleges one claim for relief against the City for declaratory
11 relief and four claims for relief against the State Board for writ of mandate. On January 2, 2020,
12 the City filed a Third Amended Cross-Complaint ("Amended Cross-Complaint"). The
13 Amended Complaint and the Amended Cross-Complaint are the operative pleadings in this
14 litigation and are collectively referred to in this Physical Solution as the "Action."

15

16 In the Amended Cross-Complaint, the City named approximately 2,300 Cross-Defendants
17 who beneficially use or who have potential rights to waters of the Ventura River flowing in a
18 known and defined channel or Groundwater in the Ventura River Watershed, including surface
19 water from the Ventura River and its tributaries and Groundwater from the Basins. The Amended
20 Cross-Complaint also alleged that the Court has in rem jurisdiction over all property overlying the
21 Basins. The Amended Cross-Complaint alleges nine separate claims for relief, which are two
22 claims for injunctive relief (first and second claims for relief), one claim for entry of a physical
23 solution (sixth claim for relief), and declaratory relief claims for pueblo and/or treaty water rights,
24 prescriptive water rights, appropriative water rights, municipal priority, the human right to water,
25 and reasonable and beneficial use (third, fourth, fifth, seventh, eighth, and ninth claims for relief),
26 and asserts the City's relative priority rights to water, including, without limitation, a request for a
27 comprehensive adjudication of the Ventura River Watershed and the imposition of a physical
28 solution.

1 By stipulation, venue for the Action was transferred from the San Francisco County
2 Superior Court to the Los Angeles County Superior Court because venue in San Francisco
3 imposed an unnecessary burden on the numerous Parties and Persons who reside or own property
4 in Ventura County. The Action was assigned to this Court.

5

6 **1.4 Service of Parties and Default**

7 On or about November 21, 2019, the Court granted the City's motion to approve a notice
8 of adjudication and form answer pursuant to Code of Civil Procedure section 836. In accordance
9 with the Court's order and pursuant to the Amended Cross-Complaint, the City has served or
10 provided notice to: (1) all property owners overlying the Basins; (2) all property owners whose
11 property is contiguous to the Ventura River or its tributaries, other than the federal government;
12 and (3) all known holders of appropriative water rights, other than the federal government.
13 Pursuant to the Court's November 21, 2019 order, the City has served a summons on
14 approximately 2,300 Cross-Defendants owning approximately 1,750 riparian parcels and
15 provided 12,766 notices to the owners of approximately 10,000 parcels overlying the Basins. A
16 complete list of all Cross-Defendants is contained in Exhibit B to this Physical Solution. A
17 complete list of all parcels that (1) are owned by Cross-Defendants and/or (2) were provided
18 notice of the Action, and which are thus bound by the Physical Solution, is contained in Exhibit C
19 to this Physical Solution.

20

21 Certain Cross-Defendants, Producers, ***De Minimis Producers, Non-Producers***, and
22 overlying landowners stipulated to this Physical Solution with the understanding that the Physical
23 Solution is not a determination of their water rights; they accordingly do not object to the
24 Physical Solution and plan to comply with the requirement to file their water Production
25 information as specified in Section 7.7.4.4 or *De Minimis* Production information as specified in
26 Section 7.7.4.6. Stipulation to the Physical Solution constitutes a response to the Amended
27 Cross-Complaint, and no default shall be taken against such stipulating Parties.

28

1 Numerous Cross-Defendants have failed to stipulate to the Physical Solution, have not
2 responded timely, or at all, to the Amended Cross-Complaint, and their defaults have been
3 entered. Notice of this Physical Solution and Judgment has been given to the defaulted Cross-
4 Defendants, together with the opportunity to be heard regarding this Physical Solution, and the
5 Court hereby enters default judgment against all defaulted Cross-Defendants and incorporates
6 those default judgments into this Physical Solution. All defaulted Cross-Defendants, and their
7 successors and assigns, are subject to the terms of the Physical Solution and Judgment, and this
8 Court's continuing jurisdiction as set forth herein. All defaulted Cross-Defendants are identified
9 in Exhibit D to this Physical Solution.³

10

11 In addition, in accordance with Code of Civil Procedure section 836, the City provided
12 notice of this Action to all property owners who were not otherwise named Parties to this Action
13 and who own property overlying the Basins. Property owners who elected to become Parties to
14 this Action are bound by this Physical Solution as Parties. Consistent with Code of Civil
15 Procedure section 836(k), property owners who did not elect to become Parties are also bound by
16 this Physical Solution. Consistent with Code of Civil Procedure section 836(j), the common law
17 of stream adjudications, and Article X, section 2 of the California Constitution, the Court has in
18 rem jurisdiction over the real property of the Watershed, identified herein, inclusive of
19 usufructuary rights to the waters of the Ventura River and its tributaries, whether flowing on the
20 surface or underground within a known and defined channel, and within the Basins, and this
21 Physical Solution applies to those properties. Therefore, all Persons holding fee title to real
22 property overlying one or more of the Basins, whether or not they chose to become a Party in this
23 Action, are subject to the terms of this Physical Solution.

24

25

26

27

28 ³ No defaults have been taken as of September 15, 2020. No defaults will be taken without notice and opportunity to
be heard. Exhibit D will be completed after the Court enters defaults, if any.

1 **1.5 Answers, Cross-Complaints, and Intervention**

2 The Court approved two form answers for use in this action, (1) “Form Answer” for
3 overlying landowners who received mailed notice of the Action and (2) “Court-Approved Answer
4 for Cross-Defendants Named in the City of San Buenaventura’s Third Amended Cross-
5 Complaint.” Certain Cross-Defendants answered the Amended Cross-Complaint by filing the
6 “Court-Approved Answer for Cross-Defendants Named in the City of San Buenaventura’s Third
7 Amended Cross-Complaint” or by filing some other answer thereto. Certain other property
8 owners in the Watershed, including but not limited to those to whom City provided required
9 notice in accordance with Code of Civil Procedure section 836, elected to become Parties in this
10 action by filing the “Form Answer.”

11

12 On or about December 6, 2019, the Court granted the unopposed motions of the State
13 Board and the California Department of Fish & Wildlife (“**Department**”) to intervene in the
14 Action, specifically in the Amended Cross-Complaint. The State Board and the Department, with
15 Court approval, elected not to file a complaint in intervention, but instead filed notices of
16 appearance in connection with the Amended Cross-Complaint, subjecting themselves to the
17 Court’s jurisdiction and in the absence of their tendering an affirmative pleading, limiting
18 themselves to the issues raised in the existing pleadings in the Action.

19

20 **1.6 City Settlement**

21 On or about September 30, 2019, Channelkeeper and the City entered into a settlement
22 agreement that resulted in the partial dismissal of Channelkeeper’s cause of action against the
23 City, pending entry of this Physical Solution (“**City Settlement**”). On or about August 20, 2020,
24 Channelkeeper and the City agreed to amend the City Settlement. This Physical Solution and
25 Judgment implements the terms of the City Settlement, as amended, including the Foster Park
26 Flow Protocols described in Section 7.3.5, results in the full dismissal of Channelkeeper’s cause
27 of action against the City, and resolves all issues between Channelkeeper and the City as set forth
28 and alleged in the Amended Complaint.

1 2. **JURISDICTION AND BASIS FOR PHYSICAL SOLUTION**

2 This Action is a comprehensive adjudication that adopts and imposes a Physical Solution
3 concerning the reasonable and beneficial uses of the waters of the Ventura River Watershed,
4 including both surface water and Groundwater, without causing waste of precious water
5 resources. The Court has original jurisdiction⁴ over the subject matter of the Action and the
6 Bound Parties sufficient to enter the Physical Solution pursuant to Article X, section 2 of the
7 California Constitution, the public trust doctrine, Code of Civil Procedure sections 830-852
8 (collectively, the “**Comprehensive Adjudication Statutes**”), as applicable, and California water
9 law and policy.

10
11 On or about March 8, 2019, the State Board submitted a letter to the Honorable Kevin C.
12 Brazile, Presiding Judge of the Los Angeles Superior Court, regarding the judicial assignment of
13 this Action and specifically requesting coordination with the Judicial Council. The Court finds
14 that pursuant to Code of Civil Procedure section 838(a)(1), assignment by the Judicial Council is
15 not required because the Action was not filed and is not being heard in a county that overlies the
16 Basins or any portion of the Basins. In addition, the Court has conferred with the Judicial
17 Council and has determined that no action by the Judicial Council is required. No Party
18 challenged this determination.

19
20 The Court and the Comprehensive Adjudication Statutes require that all Persons having or
21 claiming any right, title, or interest to Groundwater within the Basins be notified of the Action.
22 Notice has been given pursuant to the Court’s order and the Comprehensive Adjudication
23 Statutes. All Persons having or claiming any right, title, or interest to Groundwater within the
24 Basins have been given an opportunity to become Parties to the Action in accordance with the
25 Code of Civil Procedure. All named Parties who have not been dismissed or defaulted have
26 appeared or have been given adequate opportunity to appear. The Court therefore has personal

27
28

⁴ *Nat'l Audubon Society v. Superior Court* (1983) 33 Cal.3d 419, 451.

1 jurisdiction over those Parties. In addition, the Court has in rem jurisdiction pursuant to Code of
2 Civil Procedure section 836(j) over the real property, inclusive of usufructuary rights to the
3 waters within the Basins, and this Physical Solution applies to those properties overlying the
4 Basins. All known Parties having or claiming any right, title, or interest to surface waters within
5 the Watershed have been named and served.

6

7 The Court finds and concludes that the imposition of the Physical Solution: (1) optimizes
8 the reasonable and beneficial use of waters in the Ventura River Watershed and avoids waste in
9 accordance with Article X, section 2 of the California Constitution; (2) avoids unreasonable
10 injury to any water right holder and will avoid the present need for a specific allocation of water
11 among competing water right claims; (3) fairly and reasonably ensures native waters are made
12 available for beneficial use among all water right holders; (4) establishes a comprehensive
13 approach to maintaining the **Southern California Steelhead** Fishery population in the Ventura
14 River Watershed in Good Condition, consistent with the Constitutional mandate of reasonable
15 and beneficial use and the public trust doctrine; (5) establishes a management structure to ensure
16 implementation of the Physical Solution emphasizing local involvement (Water Code section
17 113); (6) facilitates water resource planning and sustainable water use and reduces uncertainty;
18 (7) furthers the mandates of the State Constitution and State water policy; and (8) as is customary
19 in comprehensive adjudications, maintains continuing jurisdiction of the Court to oversee the
20 implementation of the Physical Solution and to resolve conflicts as they may arise among the
21 Parties to and Persons bound by the Physical Solution. As such, the Physical Solution will
22 provide for the long-term, comprehensive, and efficient management of water in the Watershed in
23 a manner not otherwise available under applicable law.

24

25 In addition, and as applicable, the Court finds pursuant to Code of Civil Procedure section
26 850(a) that the Physical Solution: (1) is consistent with Article X, section 2 of the California
27 Constitution; (2) is consistent with the water right priorities of all Parties and any Persons who
28 have claims that are exempted pursuant to Code of Civil Procedure section 833 as no water rights

1 or beneficial uses will incur substantial injury by the imposition of the Physical Solution; and (3)
2 treats all objecting Parties and any Persons who have claims that are exempted pursuant to Code
3 of Civil Procedure section 833 equitably as compared to the stipulating Parties.

4

5 Following its complete evaluation and investigation of the Physical Solution, and based
6 on these findings, the Court enters this Physical Solution on all Bound Parties, including any
7 objecting Party, to this Action. Additionally, this Physical Solution binds all Persons holding fee
8 title to real property in the Basins pursuant to Code of Civil Procedure section 836.

9

10 **3. SCOPE OF PHYSICAL SOLUTION AND JUDGMENT**

11 **3.1 Resolution of all Claims**

12 As is discussed herein, all claims in the Action, Amended Complaint, and Amended
13 Cross-Complaint are hereby resolved, either finally or conditionally, by this Physical Solution
14 and Judgment, and this Physical Solution and Judgment shall constitute a final judgment pursuant
15 to Code of Civil Procedure section 577.

16

17 In the Complaint, Channelkeeper asked the Court to declare that the City's extraction of
18 water from the Ventura River from April through October is unreasonable, in violation of Article
19 X, section 2 of the California Constitution, and to direct the State Board to perform alleged
20 mandatory duties under Article X, section 2, Water Code section 275, and the public trust
21 doctrine to prevent that alleged unreasonable use by the City. Channelkeeper's claims as against
22 the City in the Amended Complaint have been resolved by the City Settlement, as amended and
23 through this Physical Solution. Channelkeeper's claims as against the State Board are deemed
24 moot based upon entry of the Physical Solution and the Court's ongoing jurisdiction over the
25 subject matter of those claims.

26

27 The Amended Cross-Complaint alleges nine separate claims for relief and asserts the
28 City's relative priority rights to water, including, without limitation, a request for a

1 comprehensive adjudication of the Ventura River Watershed and the imposition of a physical
2 solution. This Physical Solution is intended to serve as a stipulated judgment, resolving the
3 City's sixth claim for relief for the imposition of a physical solution. All other claims in the
4 Amended Cross-Complaint are conditionally reserved as is discussed in section 3.2 herein.

3.2 Reservation of Claims

7 The Parties stipulate and the Court finds that this Physical Solution and Judgment
8 sufficiently resolves the current competing claims among the Bound Parties, and that it is not
9 necessary at this time for the Court to determine the relative priority rights to water in the
10 Watershed pursuant to other causes of action in the Amended Cross-Complaint or at this time to
11 establish a comprehensive adjudication of water rights in the Watershed. The Judgment entered
12 herein is conditioned upon the successful implementation of the Physical Solution. The Court
13 specifically retains post-Judgment jurisdiction to determine the relative priority rights to all water
14 rights in the Watershed and/or to establish a comprehensive adjudication of water rights in the
15 Watershed, if it becomes necessary to do so in the future. As to the City's Amended Cross-
16 Complaint, the Court specifically retains jurisdiction to determine the City's first, second, third,
17 fourth, fifth, seventh, eighth, and ninth claims for relief, if it becomes necessary to do so in the
18 future. Any such determination shall be made pursuant to this Court's continuing jurisdiction
19 pursuant to and in accordance with Section 9.2 herein.

Nothing in this Physical Solution shall be construed as limiting or otherwise affecting prior judicial or administrative decisions regarding water rights in the Watershed, including but not limited to:

- a. Decree in Santa Ana Water Company vs. Ramon G. De La Riva, et al., 1st Judic. Dist. of CA, County of Ventura, rendered 3/10/1874;
 - b. Santa Ana Water Co. v. Town of San Buenaventura, 56 F. 339 (1893);
 - c. Rice v. Meiners (Sup. Ct. of the County of Ventura, October 22, 1902); and

1 d. Ventura Water, Light and Power v. Meiners and Rice (Sup. Ct. of the County of
2 Ventura, Court, March 12, 1904).
3

4 **3.3 Role of the State Board and the Department**

5 The State Board and the Department have intervened in this Action due to their respective
6 administrative interests related to the Watershed and have become Parties. California's Water
7 Action Plan ("WAP"), Action 4, identifies the Watershed as one of five priority stream systems
8 in which the State has an interest in protecting the Fishery in Good Condition. Consistent with
9 this goal, the Department has prepared Instream Flow Regime Criteria on a Watershed Scale for
10 the Ventura River dated March 2020 (Watershed Criteria Report No. 2020-01) ("Report"). As
11 stated in the Report:

12 The Department provides this document as a tool for consideration in water
13 management planning. It presents an analytical approach that can be
14 implemented, if appropriate, under the specific circumstances of a watershed,
15 stream or information need. This report and the Overview [of Analysis for
16 Instream Flow Regime Criteria on a Watershed Scale], in and of themselves,
17 should not be considered to provide binding guidelines, establish legal
18 compliance, or ensure project success.

19 Accordingly, this Report is "a tool for consideration in the management planning" in the
20 Watershed, and is considered as part of the broader goal of this Physical Solution, which
21 considers and balances consumptive uses, Fishery needs, and other needs within the Watershed.
22 As stated in the Overview Analysis for Instream Flow Regime Criteria on a Watershed Scale
23 (March 2020), the Report presents "a range of different flow regime criteria that can be adapted to
24 the specific needs of each selected stream and watershed." Report at p. 7. Pursuant to Water
25 Code section 1257.5, the State Board must consider the Report and any other recommendations
26 from the Department when acting on applications to appropriate water, and, subject to judicial
27 review, may seek to establish flow criteria for the Watershed that balance all needs of the
28 Watershed, which may thereafter be implemented as part of future regulatory decisions. This
Physical Solution and Judgment is consistent with and achieves the goal of protection of the

1 Fishery in Good Condition in a manner consistent with WAP, Action 4, by considering the
2 criteria set forth in the Report and balancing them against all needs of the Watershed. In
3 approving this Physical Solution and Judgment, the Court has considered the Report, exercises its
4 Constitutional responsibilities within its original and concurrent jurisdiction with the State Board
5 in the areas of public trust and Constitutional reasonable use, and finds this Physical Solution and
6 Judgment to be consistent with those recommendations and goals.

7

8 **4. VENTURA RIVER WATERSHED, VENTURA RIVER AND THE BASINS**

9 **4.1 The Ventura River Watershed**

10 The Ventura River Watershed is a coastal watershed located in southern California, with
11 an approximate catchment area of 226 square miles. The majority of the Watershed is located in
12 southwest Ventura County, with a small portion (approximately 4%) located in east Santa
13 Barbara County. The Watershed is fan-shaped and measures eighteen miles north to south and is
14 seventeen miles at its widest point. A depiction of the Watershed is included in Exhibit E to this
15 Physical Solution at pages E-1 through E-4.

16

17 The upper reaches of the Watershed lie within the Topa Topa Mountains, Santa Ynez
18 Mountains, and the greater Transverse Ranges, with ridges in these ranges delineating the upper
19 extent of the Watershed. The altitude of the Watershed varies from approximately 6,000 feet to
20 sea level at the coastal estuary. The total length from the furthest headwaters to the Pacific Ocean
21 is over thirty-three miles.

22

23 Steep mountains and foothills comprise most of the land area in the Watershed, covering
24 most of its north half and framing it on three sides, with a large portion of this area being U.S.
25 Forest Service land or other conserved lands. Land use in the Watershed is divided between
26 National Forest, open space, urban or industrial, and agricultural or rural designations. The
27 largest portion, approximately 75%, is designated as U.S. Forest Service land (55%), and open
28 space lands (20%), which includes both land set aside for conservation and land currently leased

1 for oil and gas exploration and production. Agricultural or rural areas comprise 20.5% of the
2 Watershed and are used for grazing, orchards, or row crops. Urban or industrial land use
3 comprises approximately 4.5% of the Watershed and is divided among the municipalities of the
4 City of Ojai, the western portion of the City of Ventura, and the communities of Meiners Oaks,
5 Mira Monte, Oak View, Live Oak Acres, and Casitas Springs. Most of these developed areas are
6 located on the valley floor near to or within the Ventura River's floodplain.

7

8 Precipitation in the Watershed is highly variable both spatially and temporally. Spatially,
9 the upper portion of the Watershed receives, on average, double the annual volume of rainfall
10 received in the lower portion of the Watershed. Seasonally, most of rain occurs between
11 November and April, with minimal rain occurring between May and September. Based on
12 historical records, the Watershed experiences large differences in annual rainfall volume, with
13 regular cycles of wet and dry years at least partially caused by El Nino and La Nina cycles. Long
14 periods of drought are a common occurrence in the Watershed. Periodic high flow events and
15 flooding also occur.

16

17 The Watershed is home to many species, including the Southern California Steelhead, a
18 species listed as endangered under the federal **Endangered Species Act**, as described in more
19 detail below. The regular periods of drought experienced in the Watershed, coupled with the
20 historical development within the Watershed, create challenges to the survival of the steelhead
21 population. Natural precipitation does not occur in sufficient magnitude in certain years and/or in
22 drought condition years to enable the successful migration of the steelhead to and from the Pacific
23 Ocean for the completion of its lifecycle. Consequently, habitat that enables the Fishery to
24 survive during several years of low precipitation is required to maintain the steelhead population
25 within the Watershed.

26

27

28

1 The Ventura River Watershed consists of both surface waters, including the Ventura River
2 and its tributaries, and the Basins. These various components of the Watershed are described
3 below.

4

5 **4.2 The Ventura River**

6 The Ventura River flows through the center of the Watershed, draining tributaries along
7 an approximately thirty-three mile course from its headwaters to the Pacific Ocean. The main
8 tributaries of the Ventura River include Matilija Creek, North Fork Matilija Creek, San Antonio
9 Creek, Coyote Creek, and Cañada Larga Creek.

10

11 The Ventura River has traditionally been divided into five reaches. For the reasons set
12 forth below, the Physical Solution does not use this historical division of the River, but those
13 historical reaches are: Reach 1, including the Ventura River lagoon and estuary; Reach 2,
14 extending from the top end of the estuary to a point upstream of where treated wastewater from
15 the Ojai Valley Sanitation District's Wastewater Treatment Plant is discharged to the River;
16 Reach 3, located downstream of Foster Park and extending from Weldon Canyon to the
17 confluence of Coyote Creek; Reach 4, located between Coyote Creek and the confluence with the
18 North Fork Matilija Creek and including Foster Park; and Reach 5, including North Fork Matilija
19 Creek.

20

21 The upper portions of the Ventura River and its primary headwater Matilija Creek and
22 North Fork Matilija Creek typically have perennial flow from the higher moisture in the
23 mountainous climate and high rainfall volumes in the upper catchment. The River in this portion
24 flows through narrow canyon formations with a steep bed slope resulting in high energy flows.

25

26 The middle section of the Ventura River, from the Robles Diversion to San Antonio Creek
27 confluence, consists of lower-gradient braided channels incised into a wider floodplain. Due to
28

1 the high infiltration potential of the bed material and the usually deep Groundwater table for this
 2 reach, the middle reach is often dry.

3

4 The lower section of the Ventura River, from its confluence with San Antonio Creek to
 5 the estuary, is fed by contributions from San Antonio Creek, the Ojai Valley Sanitation District's
 6 wastewater facility, and small discharges from a number of small side canyons and tributaries.

7

8 Because the historical division of the River is not linked directly to the lifecycle and needs
 9 of the Southern California Steelhead in the Watershed, this Physical Solution differs from the
 10 historical division and does divide the River into segments consistent with the lifecycle and needs
 11 of the Southern California Steelhead in the Watershed. This Physical Solution divides the River
 12 into seven reaches based on habitat requirements, habitat function, and shared hydrologic
 13 conditions. These are set forth in the table below.

14 **Table 1 – Ventura River Reaches**

Number	Reach	Fishery function
V 1	Ocean-Main Street Bridge (estuary)	Migration
V 2	Main Street Bridge-Shell Road	Migration
V 3	Shell Road-San Antonio Creek	Migration, spawning, juvenile rearing
SA 1	San Antonio Creek to Fox Creek/Ojai Creek	Migration, spawning, juvenile rearing
V 4	San Antonio Creek-Robles Diversion	Migration
V 5	Robles Diversion-Matilija Creek/North Fork Matilija Creek confluence (including 1 km section to Matilija Dam)	Migration, spawning, juvenile rearing
NF 1	North Fork Matilija Creek	Migration, spawning, juvenile rearing

25 There are several major human-made flood control and water management features on the
 26 Ventura River. Matilija Dam, currently operated by the Ventura County Watershed Protection
 27 District, is located in the upper watershed above the confluence of Matilija Creek and North Fork
 28

1 Matilija Creek. Matilija Dam was constructed in 1946-47 with an original capacity of 7,020 acre
2 feet; however, sedimentation and re-design of the dam has reduced its capacity and the dam does
3 not currently divert any water for consumptive use. Matilija Dam blocks the migration of
4 Southern California Steelhead into the historical spawning and rearing areas within Matilija
5 Creek above the Dam. The Dam does not, however, block access by steelhead to habitat within
6 North Fork Matilija Creek.

7

8 A second human-made combination of features on the Ventura River is the Robles
9 Diversion and Fish Passage Facility (“**Robles Diversion Facility**”), the Robles Canal, and Lake
10 Casitas. These facilities are operated by Cross-Defendant Casitas Municipal Water District
11 (“**Casitas**”). The Robles Diversion Facility is located on the Ventura River two miles
12 downstream of the Matilija Dam and approximately fourteen river miles from the Pacific Ocean.
13 At the Robles Diversion Facility, Casitas diverts water from the Ventura River, channels the
14 water through the 5.4 mile Robles Canal, and conveys the water to Lake Casitas. Lake Casitas is
15 a human-made lake designed to hold 254,000 acre feet of water. Aside from limited Groundwater
16 resources, Lake Casitas is the primary source of drinking water for Ojai, Oak View, Casitas
17 Springs, and the western side of the City. None of these communities has access to any other
18 sources of State-conveyed water or other imported waters. Operations of the Robles Diversion
19 Facility are governed by a license (“**Casitas License**”) issued by the State Board and a March 31,
20 2003 biological opinion (“**Casitas Biological Opinion**”) issued by the National Marine Fisheries
21 Service. Nothing in this Physical Solution lessens or increases, or may reasonably be interpreted
22 to lessen or increase, the operational requirements in the Casitas License or in the Casitas
23 Biological Opinion.

24

25 A third human-made feature on the Ventura River is the Foster Park Subsurface Dam.
26 The Subsurface Dam extends from the Coyote Creek confluence approximately 973 feet east
27 across the Ventura River. The Subsurface Dam extends five to forty feet deep from west to east.
28 The dam does not extend across the entire canyon. There is an uncompleted “gap” approximately

1 300 feet in length at the eastern end. It was constructed by the City's predecessor, Ventura
2 County Power Company, in or about 1906-1908, and is now owned and operated by the City. At
3 or adjacent to this location, the City operates a subsurface collector and three wells.

4

5 A fourth human-made feature is the Ventura River Levee. It borders the east side of the
6 Ventura River, stretching approximately 2.65 miles from the Pacific Ocean to Cañada de San
7 Joaquin. It was completed by the United States Army Corps of Engineers Los Angeles District in
8 December 1948 to protect adjacent low-elevation areas within the City from flooding. The
9 Ventura County Watershed Protection District operates and maintains the Levee. Several
10 additional smaller levees and hard stabilization structures occur through other parts of the
11 Watershed.

12

13 **4.3 Groundwater Basins**

14

15 The Ventura River Watershed includes the Basins; depictions of each of the Groundwater
basins are contained in Exhibit E to this Physical Solution at pages E-4 through E-8.

16

17 **4.3.1 The Lower Ventura River Basin**

18

19 The Lower Ventura River Basin follows the course of the Ventura River from Foster Park
20 in the north to the Pacific Ocean at its southern end. It also includes the narrow area surrounding
21 Cañada Larga Creek that flows in from the east. The northern end of this basin is marked by the
22 border with the Upper Ventura River Basin below Foster Park. The east and west borders are
23 formed by the Santa Ynez Mountains where impermeable rocks prevent significant Groundwater
24 flow or storage. To the south, the basin boundary is the coast of the Pacific Ocean. The Lower
25 Ventura River Basin is designated as Basin Number 4-3.02 in the Department of Water Resources
26 ("DWR") Bulletin 118 and has been designated by DWR as a very low priority basin under the
27 Sustainable Groundwater Management Act ("SGMA"). The surface area of the Basin is 5,300
28 acres.

1 **4.3.2 The Upper Ventura River Basin**

2

3 The Upper Ventura River Basin extends through northern and central Ventura County and
4 generally follows the Ventura River. The northernmost point is the junction of Matilija Creek
5 and North Fork Matilija Creek. Its northern border is defined by the Santa Ynez Mountains
6 where low permeability rocks do not provide additional Groundwater storage. The northeastern
7 boundary that divides the basin from the Ojai Valley Basin is formed by a subsurface
8 impermeable bedrock ridge. The basin narrows to the south as it follows the Ventura River
9 Valley until it reaches Foster Park. The Casitas Vista Bridge adjacent to Foster Park marks the
10 divide between the Upper Ventura River and Lower Ventura River Basins. The upper Ventura
11 River Basin is designated as Basin Number 4-3.01 in DWR's Bulletin 118 and has been
12 designated by the DWR as a medium priority basin under SGMA. As a medium priority basin
13 under SGMA, a Groundwater Sustainability Plan ("GSP") must be adopted for the basin by the
14 applicable Groundwater Sustainability Agency ("GSA") on or before January 31, 2022. The
15 surface area of the Basin is 7,410 acres.

16

17 **4.3.3 The Ojai Valley Basin**

18

19 The Ojai Valley Basin is located in central Ventura County. Groundwater storage occurs
20 within the alluvial material filling in the lower elevations of the relatively flat area in and around
21 the City of Ojai. Alluvial sediment is composed primarily of sand, silt, and gravel that is
22 sufficiently permeable to allow the Groundwater storage and flow. This sediment originally
23 accumulated as alluvial fan deposits, formed by rivers and streams draining from the mountains,
24 slowing, spreading out, and depositing material at the base of the mountain range. These
25 deposits, therefore, are thickest at the base of the mountains to the north and east. This basin has
26 the largest capacity to store Groundwater of the four Groundwater basins in the Ventura River
27 Watershed, with a DWR-estimated maximum storage capacity of about 85,000 acre feet and a
28 usable capacity of 25,000 acre feet. The surface area of the basin is 6,830 acres. The Ojai Valley

1 Groundwater Basin is designated as Basin Number 4-2 in DWR's Bulletin 118 and has been
2 designated by DWR as a high priority basin under SGMA. As a high priority basin under
3 SGMA, a GSP or equivalent must be adopted for the basin by the applicable GSA on or before
4 January 31, 2022. The Ojai Basin Groundwater Management Agency (**Ojai GMA**) submitted a
5 GSP alternative (**Ojai Basin Alternative or Alternative**) to DWR for evaluation and assessment
6 under SGMA. DWR did not approve the proposed alternative, citing, among other things, the
7 fact that basin Groundwater is the primary contributor of flow, for much of the year, to San
8 Antonio Creek, and no evidence was provided to indicate that subsequent studies of safe or
9 sustainable yield considered impacts to stream flows, or desired or optimal minimum
10 Groundwater discharge rates to San Antonio Creek.

11

12 The boundaries of the Ojai Valley Basin are mainly mountain ranges, where the geology
13 does not allow Groundwater flow or storage, and faults. To the north of Ojai, the Topa Topa and
14 Santa Ynez Mountains form the basin boundary. Black Mountain and the Santa Ana fault bound
15 the basin to the south, and non-permeable rock units along the eastern and western edges prevent
16 Groundwater flow into or out of the basin. The Ojai Valley Basin is separated from the Upper
17 Ojai Valley Basin by the San Cayetano Fault. The western boundary also marks the Groundwater
18 divide that separates the Ojai Valley Basin from the Upper Ventura River Basin. Groundwater
19 from this basin flows into San Antonio Creek.

20

21 In addition, Casitas, the Ventura County Watershed Protection District, the Ojai GMA,
22 and the Ojai Water Conservation District, formed in 1949 as the San Antonio Water Conservation
23 District and renamed in 1990, have collaborated to develop a project that could divert water into
24 settling ponds along San Antonio Creek for Groundwater recharge of the Ojai Basin.

25

26

27

28

1 **4.3.4 The Upper Ojai Valley Basin**

2

3 The Upper Ojai Valley Basin is located in the northeastern portion of Ventura County. It
4 is the smallest of the Basins, encompassing 3,806 acres or 5.95 square miles, and has a DWR-
5 estimated maximum storage capacity of 5,600 acre feet. The basin is an intra-montane
6 depression, bounded on all sides by mountain ranges and thrust faults that mark the boundary
7 between mountains and the valley floor. On the northern edge, Black Mountain and the San
8 Cayetano fault separate the basin from the Ojai Valley Basin. To the south, the Sulfur Mountains
9 and the Lion fault mark the boundary of the Groundwater storage zone. The primary surface
10 feature draining the basin is Lion Canyon Creek, which flows to the west and is a major
11 contributor to San Antonio Creek. The basin is split in half by a surface water divide, where the
12 eastern portion lies outside of the Ventura River Watershed. The Upper Ojai Valley Basin is
13 designated as Basin Number 4-1 in DWR's Bulletin 118 and has been designated by DWR as a
14 very low priority basin under SGMA.

15

16 **5. REASONABLE AND BENEFICIAL USES OF THE VENTURA RIVER**

17 **WATERSHED**

18 Currently, the water needs within the Ventura River Watershed, regardless of claim of
19 right, are supplied entirely from local surface water and Groundwater sources. At the time of this
20 Physical Solution, no imported water is used within the Watershed. Water from the Ventura
21 River Watershed is therefore critical to life within the Watershed, to the local economy, and to the
22 health of the region. Water from the Ventura River Watershed is vital for a variety of both
23 consumptive and instream reasonable and beneficial uses. These reasonable and beneficial uses
24 are described in more detail below.

25

26 **5.1 Forest Land and Open Space**

27 The upper portion and majority of the Watershed remains largely in natural condition and
28 has been designated as National Forest land and wilderness areas. The largest portion,

1 approximately 75%, is designated as U.S. Forest Service land (55%), and open space land (20%),
2 which includes both land set aside for conservation and land currently leased for oil and gas
3 exploration and production and may include agricultural uses. In 1995, Ventura County passed a
4 limited-growth initiative called SOAR (Save Open Space and Agricultural Resources) to curb
5 urban sprawl, preserve agricultural lands, and protect open space areas in the unincorporated
6 County land and within multiple Ventura County communities including Ventura and the greater
7 Ojai Valley. As such, the level of development within the unincorporated portions of the
8 Watershed has been limited for the last twenty-five years. In 2016, Ventura County voters
9 approved the extension of this initiative to 2050.

10

11 **5.2 Consumptive Uses**

12 Water from the Ventura River Watershed supports a variety of reasonable and beneficial
13 consumptive uses, including municipal, agricultural, and industrial uses under various claims of
14 right, e.g., riparian, overlying, appropriative, and prescriptive. The types of uses are described
15 below.

16

17 **5.2.1 Reasonable and Beneficial Municipal Uses**

18

19 Water for municipal uses accounts for approximately 55% of the total water demand from
20 the Ventura River Watershed, with residential use making up most of urban water demand. Due
21 to strict conservation efforts, urban water demand has not increased significantly in recent
22 decades, despite growth in population.

23

24 There are four major municipal water suppliers in the Ventura River Watershed. Cross-
25 Defendant Casitas is the largest water purveyor in the Watershed, providing water to both water
26 resale agencies and retail customers. Casitas uses surface water from the Ventura River, which is
27 diverted from the River through the Robles Diversion and stored in Lake Casitas, and through
28 Groundwater wells in the Upper Ventura River and Ojai Valley Basins, to provide municipal

1 service to its retail and wholesale customers. Casitas has implemented significant conservation
2 efforts to reduce municipal demand, including a Water Shortage Contingency Plan, consistent
3 with the Urban Water Management Planning Act. Casitas has declared Stage 3 water supply
4 conditions and has implemented restrictions on residential irrigation, reduced customer
5 allocations, and prohibited waste. These efforts include implementing and maintaining Stage 3
6 drought restrictions since April of 2016. These restrictions include prohibitions on water waste,
7 restrictions on the timing of residential irrigation, and a 10% reduction in all customers'
8 individual allocations for their non-essential outdoor use. Casitas also operates many
9 conservation programs including free water surveys, free water conservation devices, and rebates
10 for small irrigation controllers. In addition, Casitas offers an agricultural rebate program that
11 encourages greater water use efficiency for farms within its service area.

12

13 The City is the second largest municipal supplier within the Ventura River Watershed.
14 The City Produces water through a subsurface diversion and three subsurface wells, including its
15 Nye wells, at Foster Park to supply its municipal customers. The City has a Water Shortage
16 Event Contingency Plan that is consistent with the Urban Water Management Planning Act. The
17 City has implemented significant conservation efforts to reduce municipal demand. These efforts
18 include implementing Water Shortage Regulations and Rates, complying with the mandates of the
19 Water Conservation Act of 2009 (Senate Bill X7-7), maintaining a 20% mandatory conservation
20 cutback, promoting the use of recycled water, offering rebates to encourage water wise
21 landscaping, offering free high efficiency sprinkler nozzles, implementing an Advanced Metering
22 Infrastructure program and a Smart Irrigation Controller program, providing free water efficiency
23 surveys, enacting a Water Rights Dedication and Water Resources Net Zero (In Lieu) Fee
24 Ordinance and Resolution, and taking other steps to reduce consumption.

25

26 Cross-Defendant the Ventura River Water District (“**VRWD**”) is the third largest
27 municipal supplier within the Ventura River Watershed. VRWD supplies water to an area of
28 approximately 3.3 square miles, or 2,103 acres, stretching from the southwestern edge of the City

1 of Ojai down to the northern half of Oak View, and in the eastern half of Casitas Springs. VRWD
2 serves a population of approximately 5,700 through 2,190 connections, and its customers include
3 residential, commercial, and industrial. VRWD does not serve agricultural water. VRWD
4 operates four wells in the Upper Ventura River Basin. VRWD has implemented significant
5 conservation efforts to reduce municipal demand. During the drought, VRWD customers reduced
6 water usage by 35%, and in 2016 VRWD adopted its Water Waste and Conservation Ordinance,
7 which directed staff to expand public information campaign and increase public outreach, and
8 adopted conservation prohibitions for customers to be enforced by fines and water restrictions.
9 Additional conservation efforts include provision of free water saving equipment, water saving
10 equipment rebates, irrigation efficiency equipment, free water surveys for residential customers,
11 and funding for drought education and outreach activities.

12

13 Cross-Defendant the Meiners Oaks Water District (“**MOWD**”) is the fourth largest
14 municipal supplier within the Ventura River Watershed. MOWD supplies water to the
15 community of Meiners Oaks on the east side of the Ventura River, providing potable water
16 service to a population of approximately 4,200, through 1,280 service connections. MOWD’s
17 highest priority is to provide water for residential and commercial use, but also provides some
18 water for agricultural use, which is declining. Agricultural connections primarily serve small
19 citrus or avocado orchards. MOWD operates four wells in the Upper Ventura River Basin.
20 MOWD has implemented significant conservation efforts to reduce municipal demand. In 2020
21 MOWD adopted an Allocation Program by which MOWD adopted and enforces all appropriate,
22 applicable water conservation measures and policies adopted by its wholesale supplier, Cross-
23 Defendant Casitas, and MOWD agreed to enact 5 stages of drought measures, consistent with
24 stages that are adopted by Casitas. For each drought stage, MOWD customers are requested to
25 reduce water usage by a given percentage. Decreased water usage is encouraged through
26 MOWD’s water rate structure and required conservation measures are enforced by fines. Since
27 May of 2016 MOWD customers have been subject to a Stage 3 drought emergency, and MOWD
28 has prohibited installation of new or increased in size connections. MOWD required that its

1 customers reduce water use by at least 30%; since the drought emergency declaration, MOWD
2 has actually realized conservation rates of up to 40%.

3

4 Other municipal suppliers of water include but are not limited to Cross-Defendants
5 Casitas Mutual Water Company, Gridley Road Water Group, Hermitage Mutual Water Company,
6 North Fork Springs Mutual Water Company, Old Creek Road Mutual Water Company, Rancho
7 del Cielo Mutual Water Company, Senior Canyon Water Company, Siete Robles Mutual Water
8 Company, Sisar Mutual Water Company, and Tico Mutual Water Company.

9

10 In addition, water for domestic use is provided by way of private wells located on private
11 property. It is estimated that there are approximately 367 active wells in the Ventura River
12 Watershed. Owners/Operators of these wells are either Parties to this Action or have been
13 provided notice of this Action.

14

15 **5.2.2 Reasonable and Beneficial Agricultural Uses**

16

17 Use of water from the Watershed for reasonable and beneficial agricultural uses supports a
18 significant farming economy within the Watershed. According to DWR's Agricultural Land Use
19 and Crop Mapping from 2014, citrus and avocado are the primary crops grown within the
20 Watershed, with citrus constituting approximately 51% of the active agricultural acreage and
21 avocados constituting 32%. Other crops include grains, hay, row crops, berries, sod, olive,
22 grapes, apples, walnuts, flowers, Christmas trees, and other fruit tree crops.

23

24 The State Board regulates irrigated agriculture in the Watershed through the statewide
25 Irrigated Lands Regulatory Program to prevent agricultural discharges from impairing surface
26 water and Groundwater bodies. The regulations that apply to irrigated agriculture in Ventura
27 County are contained in the *Conditional Waiver of Waste Discharge Requirements for*
28 *Discharges from Irrigated Lands within the Los Angeles Region (“Conditional Waiver”)*. The

1 Ventura River Watershed contains approximately 3,253 acres of irrigated agriculture. As of
2 2019, approximately 92% of those acres (2,978 acres) were enrolled in the Ventura County
3 Agricultural Irrigation Lands Group (“**VCAILG**”). In order to protect both surface water and
4 Groundwater quality, the Conditional Waiver requires that growers implement best management
5 practices that address the quantity and quality of runoff and leachate from agricultural acreage.
6 Because adoption of efficient irrigation practices limits discharges to both surface and
7 Groundwater, promotion of irrigation efficiency is a priority for VCAILG and other agricultural
8 support services in Ventura County. Improvements in irrigation efficiency are promoted through
9 outreach, education classes and on-farm demonstrations, irrigation system testing services, and
10 grant programs for purchase and installation of water saving equipment, such as micro sprinkler
11 and drip irrigation systems.

12

13 Water sources to support reasonable and beneficial agricultural uses include Groundwater
14 from private wells or from small water companies, with water from Casitas used for supplemental
15 or backup water. Agriculture has implemented significant conservation efforts; specifically,
16 highly efficient irrigation systems (drip, micro sprinkler, and combinations thereof) are employed
17 on the majority of irrigated agriculture, irrigation systems are routinely tested for distribution
18 uniformity, and irrigation runoff is minimal in the Watershed.

19

20 Agricultural users within the Watershed include but are not limited to Cross-Defendants
21 Wood-Claeyssens Foundation, Rancho Matilija Mutual Water Company, Senior Canyon Mutual
22 Water Company, Rancho De Cielo Mutual Water Company, Gridley Road Water Group,
23 Hermitage Mutual Water Company, Sisar Mutual Water Company, Casitas’ and MOWD’s
24 agricultural customers, and family farms in the Ojai Valley.

25

26 The Wood-Claeyssens Foundation and its farm tenants and sub tenants produce water for
27 agricultural and domestic uses on the historic Taylor Ranch property, which borders the lower
28 Ventura River and overlies the Lower Ventura River Basin. They are working closely with the

1 Ventura Farm Bureau and the Ventura County Irrigation Land Group to farm strawberries using
2 best management practices including micro sprinklers and drip irrigation to minimize water use
3 and runoff and for the lemon and avocado orchards, planting the trees on raised beds using drip
4 irrigation, which minimizes water use and virtually eliminates runoff.

5

6 The Rancho Matilija Mutual Water Company produces water from the Watershed for its
7 shareholders to use for agricultural irrigation (primarily blackberries, row crops, and tangerine
8 orchards at this time) and for domestic ranch and livestock uses on their properties located
9 northeast of Lake Casitas. Rancho Matilija's shareholders have implemented water conservation
10 measures such as real-time smart phone-connected moisture sensing used to determine drip
11 irrigation frequency and duration as well as land fallowing.

12

13 **5.2.3 Reasonable and Beneficial Industrial Uses**

14

15 Water from the Ventura River Watershed is also used for reasonable and beneficial
16 industrial uses. Such uses include, but are not limited to, oil and gas operations. The major oil
17 field in the watershed is the Ventura oil field, an area that covers approximately 3,410 acres on
18 both sides of Highway 33 in the lower Watershed near the coast. The Ojai oil field comprises
19 1,780 acres of active fields. There are over 700 active oil wells in the Watershed. Aera Energy
20 LLC is the primary oil and gas producer in the Watershed. Beyond oil fields, the Watershed's
21 major industrial land use is in the lower watershed along Ventura Avenue east of the Ventura
22 River. Various manufacturing, construction, processing, and industrial storage facilities occupy
23 this area, a number of which serve as support services to the oil extraction industry.

24

25 **5.3 Instream Uses – *Oncorhynchus mykiss***

26 The Ventura River Watershed is home to many instream uses. It is home to eleven
27 endangered or threatened species, including the Southern California Steelhead, arroyo toad,
28 California least tern, California red-legged frog, Foothill yellow-legged frog, Least Bell's vireo,

1 southwestern willow flycatcher, and western snowy plover. This Physical Solution uses the
2 health of the Southern California Steelhead population as a proxy for the overall health of the
3 instream uses in the Ventura River Watershed, and that population will be referred to in this
4 Physical Solution as the “Fishery.” The Court finds that, consistent with the California
5 Constitution and public trust doctrine, the protections afforded to the Southern California
6 Steelhead in this Physical Solution will also benefit and protect the other instream uses within the
7 Watershed in an efficient, non-wasteful manner. The life stages, habitat, and other details
8 regarding the Southern California Steelhead within the Ventura River Watershed are described
9 below.

10

11 The Watershed is home to the Southern California Steelhead fish species with the
12 scientific name *Oncorhynchus mykiss*, which is typically abbreviated as *O. mykiss*. *O. mykiss*
13 have different life history forms, including as Rainbow Trout or as Steelhead Trout. *O. mykiss*
14 that remain in freshwater throughout their lifecycle are referred to as Rainbow Trout and have a
15 resident life history form. *O. mykiss* that migrate to the Pacific Ocean and then return to spawn in
16 freshwater are referred to as Steelhead Trout and have an anadromous life history form. Both life
17 history forms can be produced by a single set of parents depending on a variety of variables.

18

19 The particular anadromous life history form of *O. mykiss* in the Ventura River Watershed
20 has been designated as the Southern California Steelhead Distinct Population Segment. In 1997,
21 the Southern California Steelhead Evolutionarily Significant Unit (“ESU”) was listed as
22 endangered under the Federal Endangered Species Act. (62 FR 43937-01.) In 2005, critical
23 habitat for the Southern California Steelhead ESU was designated, including approximately 48
24 miles of the Ventura River and its tributaries within the Ventura River Hydrologic Unit. (70 FR
25 52488-01.) In 2006, the Southern California Steelhead Distinct Population Segment was listed as
26 endangered. (71 FR 834-01.)

27

28

1 The life history of a Southern California Steelhead starts when a female excavates a
2 shallow nest, termed a “redd,” in streambed gravel and deposits eggs, which males then fertilize.
3 The period between fertilization by the male and hatching varies, lasting from about three weeks
4 to two months depending on water temperature and other factors. After the eggs hatch, the young
5 fish remain in the gravel nest for a period of time as they develop (termed “alevins”) before
6 emerging into the surface waters. The young fish, known as fry, emerge from the gravel two to
7 six weeks after hatching. The young *O. mykiss* remain in the creek or river rearing for a period of
8 one to two years as they grow and develop into the parr stage.

9
10 Parr eventually undergo a physiological change known as smoltification that allows them
11 to migrate to saltwater (e.g., the Pacific Ocean). After growing in the marine environment for
12 typically one to four years, steelhead leave the marine environment to reproduce in the freshwater
13 environment (e.g., the Ventura River). Returning adults typically migrate to their natal rivers or
14 streams but can also spawn in non-natal streams. Steelhead, unlike salmon, may survive after
15 spawning and migrate back downstream to the ocean to spawn again the next year. Post-
16 spawning adult steelhead are termed Kelts. Steelhead, primarily females, may spawn two or three
17 times before they die.

18
19 The habitat and flow needs of the Southern California Steelhead are variable depending on
20 the life stage of the species. Primary constituent elements (“PCEs”) have been described by the
21 National Marine Fisheries Service for each life history stage of Southern Steelhead critical habitat
22 as essential to the conservation of the species. (70 FR 52630). The general PCEs for steelhead
23 are described below.

24
25 **5.3.1 Spawning**

26
27 Freshwater spawning sites with water quantity and quality conditions and substrate
28 supporting spawning, egg incubation, hatching, and larval development.

1 **5.3.2 Rearing**

2

3 Freshwater rearing sites with water quantity and floodplain connectivity to form and
4 maintain physical habitat conditions and support juvenile growth and movement; water quality
5 and forage supporting juvenile development; and natural cover such as shade, submerged and
6 overhanging large wood, large rocks and boulders, and juvenile and adult forage, including
7 aquatic invertebrates and fishes, supporting growth and maturation.

8

9 **5.3.3 Migration**

10

11 Freshwater migration corridors free of passage obstruction with water quantity and quality
12 conditions suitable for juvenile and adult movement and survival.

13

14 **5.3.4 Estuary**

15

16 Estuarine areas with water quality, water quantity, and salinity conditions suitable for
17 juvenile rearing and the physiological transitions between fresh- and saltwater (smolting).

18

19 **5.3.5 Marine Areas**

20

21 Nearshore and offshore marine areas with water quality and quantity conditions and
22 forage, supporting growth and maturation.

23

24 **5.4 Protection of Both Instream and Consumptive Uses**

25 The purpose of this Physical Solution is to protect both the reasonable and beneficial
26 instream and consumptive uses described above. Continued consumptive use of water from the
27 Watershed is essential to support human life, health, and the economy that is dependent on the
28 Watershed for this vital resource. At the same time, this Physical Solution establishes a

1 commitment to maintain the steelhead population in the Ventura River Watershed through
2 improvements to habitat quality and availability for all freshwater life stages of steelhead, as well
3 as to preserve **Historical Flow Conditions**, as set forth in the Plan, necessary to support steelhead
4 whenever physically practicable. This Physical Solution therefore balances the uses in the
5 manner compelled by Article X, section 2 of the California Constitution, the public trust doctrine,
6 and California water law by imposing the Physical Solution set forth in Section 7 of this Physical
7 Solution.

8

9 **6. INTEGRATION OF PHYSICAL SOLUTION WITH GROUNDWATER**
10 **SUSTAINABILITY PLANS**

11 GSPs are currently being developed for the Ojai Valley Basin and the Upper Ventura
12 River Basin to meet the January 31, 2022 implementation date required by SGMA and have not
13 been completed. In addition, GSPs may be developed for the Upper Ojai and Lower Ventura
14 River Basins in the future. The Physical Solution is designed to minimize interference with the
15 timely completion and implementation of the ongoing GSPs, and, in accordance with this
16 Physical Solution, the Parties and the **Management Committee** (“MC”), an arm of the Court,
17 appointed by the Court, to administer this Physical Solution and Judgment, will coordinate with
18 the GSAs completing the GSPs in finalizing and preparing the Management Plan, a plan to move
19 the conditions of the Fishery in the Watershed from Baseline Conditions to Good Condition, to
20 prevent duplication of efforts.

21

22 Water Code section 10733.6(b)(2) provides that management of a basin pursuant to an
23 adjudication action may satisfy SGMA requirements; therefore, portions of the Physical Solution
24 could be used to manage the Upper Ventura River and Ojai Basins in accordance with SGMA.
25 The Physical Solution is expressly designed to address one of the six “undesirable results” that
26 the GSP must avoid—the significant and undesirable depletions of interconnected surface water,
27 here, the impacts to Fishery. (See Water Code § 10721 (x)(6).) The Court finds that the Physical
28 Solution addresses this “undesirable result,” and if they so choose, the GSAs may adopt the

1 Physical Solution to meet the requirements of that portion of the GSP. In addition, the Physical
2 Solution and the finally adopted Management Plan will include a water management component
3 that could accommodate one or more other requirements of the GSPs, and result in avoidance of
4 the other undesirable results. (See Section 6.)
5

6 The GSAs, working in consultation with the MC, have the discretion to legally use all or
7 any portion of the Physical Solution and/or the Plan as a GSP alternative in accordance with
8 Water Code section 10733.6(b)(2)
9

10 **7. PHYSICAL SOLUTION**

11 **7.1 Three Phases of the Physical Solution**

12 The Physical Solution consists of three phases, as briefly described here and as described
13 in detail in Section 7.4 of this Physical Solution. The first phase, the **Adoption Phase**, is short,
14 begins when the Physical Solution is entered, and allows the Parties time to establish the
15 governance structure and adopt the Management Plan that will inform the following two phases.
16 In addition, the Parties will take the specific actions set forth below to improve the Watershed
17 during the Adoption Phase. The second phase, the **Implementation Phase**, is a ten-year period
18 after adoption of the Management Plan in which the Parties will implement the Management
19 Plan. The third phase, the **Adaptive Management Phase**, is a continuing series of ten-year
20 periods in which the Parties will adaptively manage the implementation of the Management Plan
21 and implement the updated Management Plan until and so that Good Condition is achieved. Each
22 of the three phases includes distinct management objectives and measures that must be met by the
23 Parties, as further described in this Physical Solution. The purpose of phasing the Physical
24 Solution is to allow the Parties to transition from the existing conditions within the Watershed
25 (referred to as the **Baseline Conditions** and initially described in Section 7.2 below and as will be
26 further defined in the Management Plan) to the improved conditions identified in the
27 Management Plan.
28

1 **7.2 Baseline Conditions – Reach-By-Reach Habitat Assessment and Limiting**
2 **Factors**

3 To prepare the Management Plan and to measure the success of the Physical Solution, it is
4 necessary to first define the current conditions as of the beginning of the Adoption Phase
5 (Baseline Conditions) in the Watershed. Defining Baseline Conditions will inform the specific
6 actions that the Parties must take to improve conditions from the Baseline Conditions. In
7 addition, defining Baseline Conditions will provide the Parties with a way to measure the success
8 of the Physical Solution and the conditions under which the Court, during the Implementation and
9 Adaptive Management Phases, may need to exercise its continuing jurisdiction to address any
10 material excursions below Baseline Conditions. This portion of the Physical Solution defines
11 initial Baseline Conditions in the Watershed. As provided below, the Management Plan will
12 expand upon and provide more detail regarding this definition of initial Baseline Conditions.

13
14 The health and habitat needs of the Fishery vary within different portions of the
15 Watershed and the different life stage needs of the species within those different portions of the
16 system. Maintaining the Fishery requires an understanding of suitability and quality of habitat
17 pertinent to the life stage habitat requirements of the species. As identified in the Report, “flows
18 in the Ventura River watershed are variable throughout the year and from year to year.” Report at
19 p. 9. The Watershed is subject to wide variations in precipitation, occasional flooding, periodic
20 large natural disasters such as wildfires, all of which significantly impact the Watershed, its water
21 quality, and the Fishery. As a result of the environmental variability in freshwater and ocean
22 conditions (e.g., drought and low flow conditions, ocean upwelling, etc.), in addition to other
23 factors such as steelhead stock-recruitment relationships (e.g., the number of spawning adults has
24 a large influence on subsequent juvenile abundance), variations in food availability within and
25 among years, quality and availability of suitable habitat, and biological interactions with native
26 and non-native species, there is high variability in steelhead population abundance within the
27 Ventura River Watershed.

1 There are many different ways to divide the Watershed for purposes of establishing
2 Baseline Conditions and efficient management of the system. Historically, and as a matter of
3 convenience, the Ventura River has been described as having the five reaches that are identified
4 earlier in this Physical Solution. Other methods have described the River as having more than
5 twenty reaches, and the Report uses sixteen reaches. This Physical Solution uses the seven
6 reaches and associated functions and habitat assessment described below, in which reaches are
7 defined based on the habitat requirements of the Watershed and the specific lifecycle needs of the
8 steelhead associated with that habitat. These seven reaches are described in Table 1 and depicted
9 in Exhibit E to this Physical Solution at page E-2, and the Baseline Conditions of each reach at
10 the time of this Physical Solution are described as follows:

11

12 **7.2.1 Reach V1**

13

14 Reach V1 begins at the Pacific Ocean and extends to the Main Street bridge crossing.
15 Reach V1 includes the Ventura River lagoon and estuary. All adult steelhead entering the
16 Ventura River from the Pacific Ocean, and all steelhead out-migrants (juvenile smolts and post-
17 spawning adults) must pass through Reach V1. Steelhead smolts that can reach the estuary from
18 upstream rearing habitats may also continue rearing in the estuary where prey items are generally
19 abundant. However, the area of the historic estuary has been reduced and habitat degraded by
20 approximately 70%. Therefore, under Baseline Conditions, the primary steelhead lifecycle
21 function of Reach V1 is for migration.

22

23 **7.2.2 Reach V2**

24

25 Reach V2 begins at the Main Street Bridge from the top end of the Estuary and ends
26 where the Shell Road Bridge crosses over the Ventura River. A major limiting factor in Reach
27 V2 is the presence of extremely dense stands of Arundo donax (“**Arundo**”), primrose, and other
28 non-native aquatic macrophytes that choke the river channel and riparian zone, precluding the

1 presence of native plants (especially willows) and blocking both upstream and downstream
2 passage of steelhead. Arundo removes surface water (through evapotranspiration) at higher rates
3 (three times the rate) than native plants. Combined with the abundance of non-native common
4 carp that degrade habitat and water quality for steelhead, potential rearing habitat (pools) is
5 severely degraded in Reach V2 at this time. Therefore, under Baseline Conditions, there is no
6 spawning habitat within this reach, and the sole steelhead lifecycle function of Reach V2 is for
7 migration.

8

9 **7.2.3 Reach V3**

10

11 Reach V3 begins at Shell Road bridge and ends at the confluence of San Antonio Creek
12 and the Ventura River. Under Baseline Conditions, reach V3 suffers from Arundo infestation,
13 degraded stream habitats, and an absence of boulder clusters. Reach V3 includes Foster Park.
14 The subsurface dam and related facilities in the vicinity of Foster Park sometimes act as barriers
15 or impediments to steelhead migration under certain conditions. Under Baseline Conditions, this
16 reach is primarily a passage corridor for upstream and downstream migrating steelhead.
17 However, spawning and rearing may be supported in certain portions of Reach V3, including in
18 the area of Casitas Springs and at the confluence of San Antonio Creek. The general pattern is
19 that fish that spawn in San Antonio Creek (Reach SA1) move to the confluence of the Ventura
20 River and to the Casitas Springs areas of Reach V3 under favorable conditions during the spring
21 to rear in the mainstem Ventura River over the summer and fall months.

22

23 **7.2.4 Reach SA 1**

24

25 Reach SA 1 includes that portion of San Antonio Creek from its confluence with the
26 Ventura River upstream to Fox Canyon. Under Baseline Conditions, San Antonio Creek contains
27 good spawning habitat, and relatively good habitat for young-of-the-year juvenile rearing.
28 However, under Baseline Conditions there is a lack of rearing habitat for older juveniles due to

1 the lack of pools throughout San Antonio Creek. The absence of pool habitat forces rearing
2 juveniles to an early outmigration into the mainstem rearing habitat in Reach V3 adjacent to and
3 downstream from the confluence with the Ventura River. There is also an absence of boulder
4 clusters that would provide velocity refuges and cover, juvenile and adult steelhead holding and
5 foraging sites, substrate for algal and macroinvertebrate production that are important to the food
6 resources for juvenile *O. mykiss* growth and survival and also promote pool formation. The
7 presence of Arundo is another limiting factor in this reach. An additional limiting factor in San
8 Antonio Creek is the presence of livestock that, when unconstrained, trample the stream banks,
9 causing sedimentation in the stream channel and spawning beds and reducing riparian vegetation
10 as well as increased nutrient and coliform loading to the creek.

11

12 **7.2.5 Reach V4**

13

14 Reach V4 is located between the confluence with San Antonio Creek and the Robles
15 Diversion Facility. Under Baseline Conditions, this reach includes what is commonly referred to
16 as the “dry reach” downstream of the Robles Diversion Facility that often has intermittent flows
17 or is dry during the summer and fall months. Under dry conditions, adult steelhead are unable to
18 migrate to upper Watershed spawning and rearing habitat, and smolts that are produced in the
19 upper Watershed (Reach V5 and Reach NF 1) are unable to out-migrate through this reach.
20 Further, smolts that do attempt to out-migrate are often left stranded in drying pools, including
21 pools just downstream of the Robles Diversion Facility. During wet years, this reach is suitable
22 for steelhead migration for short periods during extended runoff from storms. Under Baseline
23 Conditions, therefore, the lifecycle function served by Reach V4 is for migration under suitable
24 precipitation conditions.

25

26

27

28

1 **7.2.6 Reach V5**

2

3 Reach V5 extends upstream from the Robles Diversion Facility to the confluence of
4 Matilija Creek and North Fork Matilija Creek, including the section below Matilija Dam. Under
5 Baseline Conditions, Reach V5 contains some rearing and spawning habitat. Its primary
6 functions under Baseline Conditions are for migration, spawning, and juvenile rearing, but the
7 presence of non-native predatory largemouth bass in this reach may reduce juvenile steelhead
8 survival.

9

10 **7.2.7 Reach NF 1**

11

12 Reach NF 1 extends from the confluence of North Fork Matilija Creek to the upstream
13 reaches of North Fork Matilija Creek where a complete barrier to upstream migration exists at the
14 Wheeler Gorge Campground. Under Baseline Conditions, Reach NF 1 has good steelhead
15 spawning and rearing habitat where available, with higher densities of *O. mykiss* spawners and
16 both young-of-the-year and older juveniles than reaches in the lower Watershed. This reach has
17 good pool rearing habitat. This reach also includes the presence of residualized
18 steelhead/rainbow trout that support the overall steelhead population. Limiting factors under
19 Baseline Conditions in this reach include only marginal availability of suitably sized spawning
20 areas and gravel, and potential competition between juvenile steelhead and resident rainbow trout.

21

22 **7.2.8 Continuing Jurisdiction is Reserved for Coyote Creek and Cañada**
23 **Larga Tributaries**

24

25 Although no management actions are presently recommended for two tributaries of the
26 Ventura River, they are nevertheless included in this Physical Solution, and the Court retains
27 continuing jurisdiction over them. First, Coyote Creek from Lake Casitas to the confluence with
28 the Ventura River is dry much of the year due to the Lake Casitas Dam, and the habitat in this

1 reach is severely degraded. In addition, on the Cañada Larga tributary, the Highway 33 bridge
2 creates a barrier to steelhead passage, but it cannot reasonably be removed. The adaptive
3 management process in this Physical Solution will allow for the reconsideration of management
4 actions for these two tributaries in the future.

5

6 **7.3 Management Plan/Mandatory Plan Elements**

7 The core of this Physical Solution is the development, implementation, and adaptive
8 management and updating of a Management Plan (or the “Plan”) that will move the condition of
9 the Southern California Steelhead in the Watershed from the Baseline Conditions to Good
10 Condition, as defined in the Plan and in this Physical Solution, during the life of the Physical
11 Solution. While rainfall and flow in the Watershed has largely remained consistent over the
12 historical period (generally 1929 through 2019), habitat conditions in the Watershed downstream
13 of Matilija Dam have been degraded over the past 150 years through agricultural and urban
14 development, construction of dams, water storage infrastructure, flood control infrastructure, and
15 other factors. Specific efforts to maintain Historical Flow Conditions upon which the Southern
16 California Steelhead depend and habitat enhancement Plan elements are expected to contribute to
17 improved access and migration opportunity, habitat quality, availability, and suitability. These
18 efforts to maintain Historical Flow Conditions and these habitat improvements are expected to
19 lead to improved abundance of steelhead and other fish and wildlife within the Watershed. The
20 Plan will also provide detailed monitoring programs to provide feedback for adaptive resource
21 management. The hydrogeology of the Watershed, combined with high temperatures and the
22 seasonality and variability of precipitation, causes portions of the mainstem river and tributaries
23 to exhibit intermittent flows during the summer months, regardless of human consumptive use.
24 This creates dry reaches where no summer rearing by Steelhead or other fish is possible. These
25 intermittent reaches usually provide passage corridors during higher flow periods in the winter
26 and early spring. Actions to protect Historical Flow Conditions, which are largely replicated by
27 existing flow conditions, in combination with additional habitat enhancement measures identified
28

1 in the Plan, will be sufficient, barring extraordinary conditions, to move the Fishery from
2 Baseline Conditions to Good Condition.

3
4 The required elements of this Plan are set forth in this Section 7.3 of the Physical
5 Solution. During the Adoption Phase, the Parties will create more specific mandatory
6 implementation actions and details to achieve the required elements and adopt the final Plan,
7 subject to Court oversight. During the Implementation and Adaptive Management Phases, the
8 Parties will implement the Plan and regularly measure its success. The Court will retain
9 jurisdiction to ensure Plan implementation and to address material excursions below Baseline
10 Conditions, following the procedures outlined in this Physical Solution. The Plan must include
11 the mandatory elements described in this section.

12

13 **7.3.1 Management Objectives**

14

15 The Plan shall include management objectives, one of which must be to develop and
16 implement actions that are intended to move the condition of the Fishery in the Watershed from
17 the Baseline Conditions to Good Condition, as defined in the Plan and this Physical Solution.

18

19 **7.3.2 Baseline Conditions Refined**

20

21 The Plan shall provide a more detailed assessment of Baseline Conditions that will include
22 the definition contained herein but shall include additional metrics to assist with determining
23 material excursions below Baseline Conditions and improvements above Baseline Conditions.

24

25 **7.3.3 Healthy Fishery/Good Condition Defined**

26

27 The Plan shall establish detailed criteria to be used to define and measure what constitutes
28 a healthy Fishery and Good Condition in the Watershed. The Plan shall, at a minimum, use the

1 following approach to Good Condition. The recognized method for determining whether a
2 fishery is in good condition is to assess the condition of the fishery at the individual, population,
3 and community level or tiers. Under this method, the Fishery in the Watershed will be considered
4 to be in a Good Condition when the qualitative individual, population, and community conditions
5 described below are being achieved. The naturally high variability in the dynamics of the
6 Ventura River *O. mykiss* population makes quantitative metrics infeasible, and hence this
7 Physical Solution uses qualitative metrics to assess the condition of the Fishery. The qualitative
8 metrics established in the Plan will be assessed based on the weight of the evidence and on the
9 specific functions served by each reach of the Watershed. The general conditions that the Plan
10 must use to assess the condition of the *O. mykiss* population within the Watershed are as follows:

11

12 **7.3.3.1 *O. Mykiss* Population**

13 The *O. mykiss* population may be considered to be in a Good Condition if, based on
14 snorkel surveys or similar evidence, the population shows presence within suitable habitats
15 (including those where habitat enhancement actions have been implemented as part of this
16 Physical Solution) within the geographic distribution of the Ventura River Watershed, or the
17 population shows evidence of rebounding following adverse environmental conditions, such as
18 drought. Natural *O. mykiss* populations, including the Ventura River population, experience
19 dynamic and variable abundance within and between years in response to a number of factors,
20 many of which are outside of the control of the Physical Solution (e.g., ocean conditions,
21 interactions with native and non-native species, baseline hydrologic conditions, and extended
22 droughts, etc.) and therefore population abundance or species densities alone are not an effective
23 measure of the condition of the Fishery. However, when assessed within this dynamic and
24 variable system, the *O. mykiss* population should be present within suitable habitat within the
25 Watershed when the Fishery is in a Good Condition.

26

27

28

1 **7.3.3.2 *O. Mykiss* Population Diversity**

2 The *O. mykiss* population may be considered to be in Good Condition if, based on snorkel
3 surveys or similar evidence, the population shows evidence of life stage diversity as reflected by
4 multiple age classes, including successful reproduction reflected in the presence of young-of-the-
5 year *O. mykiss*.

6 **7.3.3.3 Condition of Individual *O. Mykiss***

7 The *O. mykiss* population may be considered to be in a Good Condition if, based on
8 snorkel surveys or similar evidence, individual fish in the documented population appear to be
9 healthy and in good shape, free from abnormalities associated with a diseased or unhealthy
10 population.

11 **7.3.3.4 Condition of Overall Watershed *O. Mykiss* Population**

12 The *O. mykiss* population may be considered to be in a Good Condition if, based on
13 snorkel surveys or similar evidence, the predominant species inhabiting the Watershed are native
14 species (both aquatic and riparian species) with relatively low abundance of non-native species
15 predators and competitors of *O. mykiss*.

16 **7.3.4 Habitat Enhancements and Other Specific Watershed Improvement Projects**

17 The Plan will include specific management measures or actions that when implemented
18 will improve Baseline Conditions and move the Fishery toward Good Condition. Measures can
19 be completed by entities that are not a Party to this Physical Solution; however, this Physical
20 Solution imposes a duty to support all management measures in the Plan and ensure their
21 implementation. At a minimum, the Plan shall include the following measures:

1 **7.3.4.1 Fish Passage Improvements 1 – Sub-Surface Interceptor Wall**
2 **at Foster Park**

3 Fish Passage Improvements 1 consist of the notching of the existing sub-surface dam at
4 Foster Park, within Reach V3, and improvements around a concrete pipe in the Ventura River that
5 currently serve as potential fish passage barriers under low-flow conditions. The goal of the
6 projects is to extend the flow range for unimpeded passage for *O. mykiss* and allow greater access
7 to existing habitat in the upper Watershed. The City shall cause the construction of Fish Passage
8 Improvements 1, at its sole cost, during the Adoption Phase.

9

10 **7.3.4.2 Fish Passage Improvements 2 – Improvement of the Fraser**
11 **Street Road Crossing**

12 Fish Passage Improvements 2 consist of improvements to the Fraser Street Road Crossing.
13 The Fraser Street Road Crossing is located in Reach SA 1. Currently, Fraser Street Road
14 Crossing serves as a potential fish passage barrier under certain flow conditions. Fish Passage
15 Improvements 2 will ensure unimpeded passage across a wide range of flow conditions,
16 providing spawning access over a range of water year types.

17

18 **7.3.4.3 Gravel Enhancement in Matilija Creek and North Fork**
19 **Matilija Creek**

20 This measure would augment spawning gravel in Reach NF 1. The measure would
21 strategically inject sufficient amounts of suitable size gravels during appropriate years within a
22 period of ten (10) years after entry of the Physical Solution and Judgment. Gravels would then be
23 naturally dispersed downstream during high flow events: (1) to replace gravel recruitment
24 currently blocked by Matilija Dam, (2) to improve gravel substrate for macroinvertebrate
25 production, and (3) to improve the availability of suitable gravel for *O. mykiss* redd construction,
26 spawning, and egg incubation.

1 **7.3.4.4 Boulder and Large Woody Material Augmentation in San
2 Antonio Creek**

3 This measure would install boulder cover and large woody material augmentation in San
4 Antonio Creek to enhance juvenile Steelhead rearing habitat, improve protection and cover from
5 predation, increase structure diversity of habitat, and increase holding habitat as a velocity refuge.

6

7 **7.3.4.5 Large Woody Material Augmentation in the Mainstem Ventura
8 River at the Confluence with San Antonio Creek**

9 This measure would increase the availability of large woody material and create and
10 stabilize deeper pool habitat in the mainstem Ventura River at the confluence with San Antonio
11 Creek, improving juvenile over-summering rearing conditions and resulting in greater survival of
12 juvenile rearing steelhead.

13

14 **7.3.4.6 Arundo Removal**

15 This measure would consist of the removal of the Arundo to allow for improvement to
16 upstream and downstream passage for adult and juvenile steelhead by reducing transpiration,
17 decreasing adverse geomorphological conditions such as channel braiding, encouraging complex
18 habitat creation, increasing native plant and wildlife species, and improving fish passage
19 conditions by removing passage impediments.

20

21 **7.3.4.7 Reduction of Predator and Non-Native Fish**

22 Invasive non-native fish species impair the viability of the Fishery. Non-native fish
23 species compete with native fish species for food and habitat, degrade habitat quality and water
24 quality (e.g., carp), and are predators (e.g., largemouth bass) on juvenile steelhead. This measure
25 would, subject to permitting, implement some or all of the numerous existing and proven non-
26 native fish removal techniques (e.g., electrofishing, netting, hook and line, spearfishing, etc.).

1 **7.3.4.8 Additional Projects for Further Consideration**

2 The Plan shall describe how the Parties will participate and support other Watershed
3 projects that will help improve on Baseline Conditions and move the Fishery toward Good
4 Condition. For example, long-term plans exist for the removal of Matilija Dam. Removal of the
5 Dam would open access to major historical spawning and rearing grounds for the Fishery.
6 Consistent with the continuing provision of water for existing reasonable and beneficial
7 municipal, agricultural, industrial, or other consumptive uses, the Parties shall support efforts to
8 remove Matilija Dam. This support shall include, but not be limited to, consideration of the
9 adoption of resolutions of support for Dam removal or submission of written letters of support.

10
11 The Plan will also consider other proposed or ongoing Watershed projects, including, but
12 not limited to, improvements to the Live Oaks and Casitas Springs levees, removal of the
13 Wheeler Gorge Campground passage barrier, replacement of the current Grand Avenue fair
14 weather crossing with a free span bridge, addressing various pipeline crossings that could present
15 barriers such as the Casitas pipeline that crosses San Antonio Creek and the Ojai Valley
16 Sanitation District pipeline that crosses San Antonio Creek, brownfield remediation projects,
17 conservation easements or livestock exclusion projects, and land protection projects.

18
19 **7.3.5 Protection of Historical Flow Conditions and Site-Specific Flow**
20 **Enhancement**

21
22 Precipitation in the Watershed is highly variable both spatially and temporally. Spatially,
23 the upper portion of the Watershed receives, on average, double the annual volume of rainfall
24 received in the lower portion of the Watershed. Seasonally, the Watershed receives most of its
25 rainfall between November and April, with minimal rainfall between May and September. Based
26 on historical records, the Watershed experiences large differences in annual rainfall volume, with
27 wet and dry years at least partially caused by El Niño and La Niña cycles. Because of the
28 extreme variability in precipitation timing and amount in the Watershed, streamflow in the River

1 and its tributaries is also highly variable year-to-year and within a given year, independent of
2 consumptive uses. The Fishery has adapted to this variability in flow in the Watershed and has
3 been considered to be in Good Condition when flows in the past were in the range of current
4 conditions.

5

6 Because the decline in the Fishery is linked most directly to loss of habitat and access
7 thereto, the main actions required by the Plan will focus on improvements to Fishery habitat and
8 Fishery access to habitat. At the same time, however, the Plan must also include specific steps to
9 maintain and, if feasible, enhance Historical Flow Conditions critical to the Fishery. At a
10 minimum, the Plan will address three high priority juvenile steelhead rearing reaches and will
11 protect Historical Flow Conditions in these reaches as follows:

12

13 (1) Foster Park Flow Protocols. The Plan will recognize and include the City's existing
14 water management protocols at Foster Park that meet or exceed requirements to protect Historical
15 Flow Conditions in this reach. The City's implementation of these Foster Park Flow Protocols
16 does not determine or limit its water rights in any way, consistent with this Physical Solution.
17 The City will be responsible for continuing its existing Foster Park Flow Protocols, as described
18 below:

19

20 (a) When daily average flows as measured at the VR-1 gage fall below 4.0 cubic
21 feet per second ("cfs") for 3 consecutive days, the City will shut down wells Nye 7 and 8
22 before noon on the following business day;

23

24 (b) If daily average flows as measured at the VR-1 gage fall below 3.0 cfs on any
25 day of the time period in Section (a) above, the City will also shut down the subsurface
26 intake at the same time as the shutdown in Section (a) above;

27

28

1 (c) If the daily average flows as measured by the VR-1 gage fall below 4.0 cfs for
2 3 consecutive days, but stay above 3.0 cfs during that period, the City would shut down
3 wells Nye 7 and 8 but would be permitted to continue to operate the subsurface intake
4 until the daily average flows fall below 3.0 cfs for three consecutive days, at which time
5 the City will cease all water extraction at Foster Park until flows return to levels above
6 these thresholds.

7

8 (d) The City shall monitor the impact of pumping on instream flows using the
9 VR1 and VR2 gages. The City shall specifically evaluate the impact of continued
10 pumping at the subsurface intake after the shutdown of wells Nye 7 and 8 pursuant to
11 Sections (a) to (c) above. If monitoring at station VR-2 downstream demonstrates a
12 sustained impact on instream flows after the shutdown of wells Nye 7 and 8, or after the
13 shutdown of the subsurface intake, the City and Channelkeeper shall meet and confer on
14 or before 30 June of the following year to discuss whether continuing to pump
15 groundwater when instream flows fall below 4.0 cfs may occur or whether all Production
16 should stop at 4.0 cfs. If the City and Channelkeeper are unable to agree, either may
17 pursue any available legal remedy they have related to the sole question of whether
18 production should stop at 4.0 cfs by seeking resolution of the issue via the Court pursuant
19 to this Physical Solution.

20

21 (e) The Foster Park Flow Protocols may be temporarily modified or suspended
22 under emergency conditions. Emergency conditions include Act of God, unforeseen pipe
23 failure, and the inability of the City to obtain sufficient usable replacement water from
24 Casitas or other sources to serve its customers. The City shall promptly notify
25 Channelkeeper in writing whenever such an emergency condition exists. The notification
26 shall include the justification for the modification, and supporting documentation. If
27 necessary, the City and Channelkeeper shall meet and confer about the modification or

1 suspension to limit its impact on Southern California steelhead and other impacted
2 species.

3

4 (f) If the City seeks to modify the Foster Park Flow Protocols pursuant to Section
5 (e) above because it is unable to obtain replacement water from Casitas, the City shall
6 provide Channelkeeper with 30 days written notice, if such notice is feasible in light of
7 water management plans or testing trends, or as much advance notice as is feasible when
8 the inability results from an unexpected event. If the modification is based on the inability
9 to obtain replacement water from Casitas, the City shall implement the following specific
10 water conservation measures in the impacted service area during the emergency period of
11 modification or suspension:

12

13 (i) City Actions

- 14 a. Encourage maximum conservation by all customers and users in
15 the impacted area.
- 16 b. No outdoor irrigation using potable water will be allowed.
- 17 c. All water use not required for health and safety is prohibited.
- 18 d. Suspend the issuance of any new development approvals and
19 new water connections in the impacted area other than those
20 required to be processed by state law. Building permits which do
21 not create new demand for water or which are for emergencies,
22 public safety and water conservation may be exempted by the City
23 Manager.

24 (ii) Water Customer Actions

- 25 a. Comply with mandatory water conservation regulations.
- 26 b. Prohibition of all outside water use unless necessary for the
27 preservation of health and safety and the public welfare.

1 c. Watering with hand-held five gallon maximum bucket, filled at
2 exterior hose bib or interior faucet (not by hose) shall be allowed at
3 any time. This will assist in preserving vegetable gardens or fruit
4 trees.

5 d. The filling of swimming and wading pools is prohibited;

6

7 (2) San Antonio Creek. The Plan shall identify Historical Flow Conditions and measures
8 to prevent degradation of flows in San Antonio Creek, as measured at the gage at San Antonio
9 Creek (USGS gage 11117500; VCWPD Station 605), and implement monitoring measures to
10 determine whether it is feasible to enhance flows and/or habitat in San Antonio Creek. This will
11 include, but not be limited to, providing incentives and legal certainty to encourage voluntary
12 projects or actions by landowners that have a documented in-stream flow enhancement benefit.
13 Examples of these efforts include projects identified as part of the Ventura River Watershed
14 Instream Flow Enhancement and Water Resiliency Framework; and

15

16 (3) North Fork Matilija Creek. The Plan shall identify Historical Flow Conditions and
17 measures to prevent degradation of Historical Flow Conditions in North Fork Matilija Creek, as
18 measured at the gage at North Fork Matilija Creek (USGS gage 11116000; VCWPD Station 604),
19 and implement monitoring measures to determine whether it is feasible to enhance flows and/or
20 habitat in North Fork Matilija Creek.

21

22 Consistent with the continuing provision of water for existing reasonable and beneficial
23 municipal, agricultural, industrial, or other consumptive uses, the Plan shall also consider other
24 water management measures to be implemented by the Bound Parties, designed to reduce the
25 demand for water from the Watershed or to adjust the timing and amount of Production as
26 necessary to maintain and, if feasible, enhance base flows to improve habitat conditions for
27 steelhead. Such efforts, upon a finding of cause and effect between that Production and Fishery
28 condition, may include conservation efforts, scheduling the timing of Production in a manner

1 consistent with the life stage needs of the steelhead, and reducing Production consistent with
2 existing reasonable and beneficial uses. These measures shall be equitably tailored to each Bound
3 Party, taking into consideration past and current conservation efforts. The Plan may also consider
4 any other feasible actions to be implemented by the Bound Parties to improve water quality
5 within the Watershed. Subject to the **Uncontrollable Conditions**, the Court retains jurisdiction
6 to order specific water management actions when there are material excursions below Baseline
7 Conditions during the Implementation of Adaptive Management Phases.

8

9 **7.3.6 GSP Processes**

10

11 The Plan shall describe how the Plan will work in concert with the GSP processes.
12 Consistent with the continuing provision of water for existing reasonable and beneficial
13 municipal, agricultural, industrial, or other consumptive uses, the Parties shall exercise good faith
14 and reasonable efforts to participate in the creation and implementation of GSPs for the Basins
15 within the Watershed that require GSPs. In accordance with Code of Civil Procedure section
16 830(a)(4), the Parties anticipate that this Physical Solution will help to achieve the Groundwater
17 sustainability goals of SGMA. Specifically, this Physical Solution avoids the undesirable result
18 of depletions of interconnected surface water that have significant and unreasonable adverse
19 impacts on beneficial uses of the surface water, as defined in Water Code section 10721(x)(6).
20 By implementing the Plan to maintain the Fishery in a Good Condition, the Parties are avoiding
21 any significant and unreasonable adverse impacts to instream beneficial uses that may be
22 associated with Production in the Basins. In addition, participation by the Parties in the
23 implementation of the GSPs, once adopted and enforced by the GSAs, will assist in the
24 implementation of this Physical Solution. This Physical Solution and the GSPs will therefore
25 complement each other and collectively assist in achieving the goals of both the Physical Solution
26 and SGMA.

1 **7.3.7 Monitoring and Reporting**

2

3 The Plan shall include a specific monitoring and reporting program, including the
4 monitoring of hydrology, precipitation, in-stream flow, surface water-Groundwater interaction,
5 water quality, and Fishery and habitat. At a minimum, the general condition of the Fishery and
6 the Watershed shall be assessed and reported annually as compared to Baseline Conditions. The
7 Plan shall establish a schedule for more detailed monitoring that is based on snorkel surveys or
8 other similar evidence, and could include fish tracking or tagging systems, which shall occur at a
9 minimum every five years. The Plan shall also establish a schedule for more detailed reporting
10 based on these more detailed monitoring efforts.

11

12 **7.4 Phasing**

13 The Parties are obligated to implement the Physical Solution to move the conditions in the
14 Watershed from the Baseline Conditions toward Good Condition. Implementation of the Physical
15 Solution will take place in the following three phases:

16

17 **7.4.1 Adoption Phase**

18

19 **7.4.1.1 Term**

20 The period from entry of this Physical Solution through adoption of the Plan shall be
21 defined as the “**Adoption Phase**,” and shall be no longer than eighteen (18) months, unless
22 otherwise extended by the Court upon motion of any Party for good cause shown.

23

24 **7.4.1.2 Required actions during Adoption Phase**

25 During the Adoption Phase, the Parties must perform all the actions listed below
26 (**Adoption Phase Requirements**). Failure to implement the Adoption Phase Requirements will
27 be a violation of this Physical Solution. Adoption Phase Requirements shall be implemented by
28 individual Parties, or through action of the MC to be funded by the Parties.

1 **7.4.1.2.1 Formation and Funding of the MC**

2 During the Adoption Phase, certain Parties will organize the MC and provide sufficient
3 funding for the MC and the **Technical Advisor**.

5 **7.4.1.2.2 Adoption of the Management Plan**

6 During the Adoption Phase, the Parties must finalize and have the MC adopt the Plan,
7 subject to the Court's review and approval.

9 **7.4.1.2.3 Foster Park Flow Management**

10 The City shall implement the Foster Park Flow Protocols described in Section 7.3.5.

12 **7.4.1.2.4 Fish Passage Improvements 1**

13 During the Adoption Phase, the City shall complete the construction of Fish Passage
14 Improvements 1.

16 **7.4.1.2.5 Arundo removal**

17 During the Adoption Phase, certain Parties shall commence or fund and cause Arundo,
18 removal programs at strategic locations within the Watershed. The Wood-Claeyssens Foundation
19 will prepare and propose an Arundo and trash/debris removal program for those portions of the
20 Ventura River contiguous to its riparian land within Reaches V1 and V2 and for implementation
21 forthwith in a form and manner approved by the MC.

23 **7.4.1.2.6 Initiation of Monitoring Program**

24 During the Adoption Phase, the Bound Parties shall commence initial hydrology and
25 biology monitoring within six months of entry of this Physical Solution. The complete
26 monitoring and assessment program shall be fully developed and implemented by the end of the
27 Adoption Phase.

1 **7.4.1.3 Objectives for the Adoption Phase**

2 During the Adoption Phase, the Parties anticipate that implementation of the Adoption
3 Phase Requirements will result in improvements in habitat and water management above the
4 Baseline Conditions, but improvements may be marginal given the limited time involved in the
5 Adoption Phase. Achievement of the Adoption Phase Requirements shall be compliance with the
6 Physical Solution.

7

8 **7.4.2 Implementation Phase**

9

10 **7.4.2.1 Term**

11 The “**Implementation Phase**” begins upon final adoption of the Plan and runs for a ten
12 (10) year period. Once adopted, the Plan becomes an enforceable part of this Physical Solution,
13 and failure to complete the actions required by the Plan (**Implementation Phase Requirements**)
14 will be a violation of this Physical Solution.

15

16 **7.4.2.2 Required Actions During the Implementation Phase**

17 During the Implementation Phase, the Bound Parties must complete the Implementation
18 Phase Requirements, including implementation of the Fishery management actions as provided in
19 the Plan, continuation of the Arundo, trash/debris removal programs proposed and initiated within
20 Reaches V1 and V2 pursuant to Section 7.4.1.2.5 above as may be modified over time to address
21 current conditions, implementation of the monitoring and assessment program and submission of
22 all required annual and other reports.

23

24 **7.4.2.3 Objectives for the Implementation Phase**

25 During the Implementation Phase, the Parties anticipate that implementation of the
26 Implementation Phase Requirements will result in improvements above the Baseline Conditions
27 and progress toward Good Condition. If, during the Implementation Phase and subject to
28 Uncontrollable Conditions, there are material excursions below Baseline Conditions, as defined in

1 the Plan, as originally adopted, or as it may be amended during the Implementation Phase, the
2 Court may exercise its continuing jurisdiction pursuant to Section 7.5 and for good cause shown,
3 may require additional actions beyond the Implementation Phase Requirements. Otherwise,
4 achievement of the Implementation Phase Requirements shall be compliance with the Physical
5 Solution.

6

7 **7.4.3 Adaptive Management Phase**

8

9 **7.4.3.1 Term**

10 The Implementation Phase ends when the Plan has been implemented for a period of ten
11 (10) years, and the “**Adaptive Management Phase**” begins. The Adaptive Management Phase
12 shall consist of a series of ten (10) year periods in which the Plan is updated and Plan updates are
13 adopted and implemented until Good Condition is achieved. Once readopted, each updated Plan
14 becomes an enforceable part of this Physical Solution, and failure to complete the actions
15 required by the updated Plan (**Adaptive Management Phase Requirements**) will be a violation
16 of this Physical Solution.

17

18 **7.4.3.2 Required Actions During Adaptive Management Phase**

19 During each Adaptive Management Phase, the MC must update and readopt the Plan as
20 necessary to achieve Good Condition. Once the updated Plan for each Adaptive Management
21 Phase is adopted, the Bound Parties must complete the Adaptive Management Phase
22 Requirements, including implementation of the Fishery management actions as provided in the
23 updated Plan, continuation of the Arundo, trash/debris program removal in Reaches V1 and V2
24 initiated pursuant to Section 7.4.1.2.5 above as may be modified over time to address current
25 conditions, implementation of the monitoring and assessment program and submission of all
26 required annual and other reports.

27

28

1 **7.4.3.3 Objective for the Adaptive Management Phase**

2 During the Adaptive Management Phase, the Parties anticipate that implementation of the
3 Adaptive Management Phase Requirements will result in improvements above the revised
4 Baseline Conditions, as defined in the updated Plan, and ultimate achievement of Good
5 Condition. If, during each Adaptive Management Phase and subject to Uncontrollable
6 Conditions, there are material excursions below the revised Baseline Conditions as defined in the
7 then current updated Plan, the Court may exercise its continuing jurisdiction pursuant to Section
8 7.5 and, for good cause shown, may require additional actions beyond the Adaptive Management
9 Phase Requirements. Otherwise, achievement of the Adaptive Management Phase Requirements
10 shall be compliance with the Physical Solution.

11

12 **7.5 Role of Court to Enforce Physical Solution**

13 Under its continuing jurisdiction, the Court shall have the authority to enforce any failure
14 to implement any mandatory requirement of the Physical Solution. If, after completing the
15 dispute resolution process set forth in Section 7.8 of this Physical Solution, any Bound Party
16 believes that another Bound Party is not complying with the mandatory requirements of this
17 Physical Solution, that Bound Party may petition the Court for appropriate relief upon good cause
18 shown. In addition, if, after the Adoption Phase and despite implementation of the Plan, and
19 subject to Uncontrollable Conditions, there are material excursions below Baseline Conditions, as
20 described above, the Court may, on motion and for good cause shown, order such additional
21 actions as required to return to a condition at or above Baseline Conditions.

22

23 **7.6 Uncontrollable Conditions**

24 The Watershed and the Fishery face significant threats from climate change, natural
25 catastrophes, drought conditions, water shortages, and similar external factors that are beyond the
26 ability of the Bound Parties to control. In addition, implementation of the Physical Solution
27 requires in certain cases approval of other governmental agencies not party to this Physical
28 Solution. Finally, a minimum amount of reasonable and beneficial consumptive use of water

from the Watershed is necessary to sustain existing human populations and uses and to implement the human right to water. See Water Code § 106.3. If implementation of any requirement of the Physical Solution becomes impracticable due to an Uncontrollable Condition, the Bound Parties will not be considered to be in violation of this Physical Solution for the period of time in which the Uncontrolled Condition prevents performance. As used in this Physical Solution, an “Uncontrollable Condition” is any circumstance beyond the Bound Parties’ control, including without limitation, any act of God, war, fire, earthquake, flood, windstorm, drought or natural catastrophe, including climate change; the need to provide a minimum amount of reasonable and beneficial consumptive use of water from the Watershed; criminal acts; civil disturbance, pandemic, vandalism, sabotage, or terrorism; restraint by court order or public authority or agency; or action or non-action by, or inability to obtain the necessary authorizations or approvals from any governmental agency.

13

14 **7.7 Management Committee (MC)**

15 **7.7.1 Appointment**

16

17 The Court hereby establishes the MC, which shall be a five member board composed of one representative each from the (1) City, (2) Casitas, (3) the Special District Group (consisting of rotating members of VRWD and MOWD), (4) the Agricultural/Mutual Water Company Group (as they may designate in their discretion), and (5) the Groundwater Sustainability Agency Group (consisting of rotating members of the Upper Ventura River Groundwater Agency and Ojai Basin Groundwater Management Agency). There shall be two non-voting ex officio members of the MC composed of (1) one representative from the County of Ventura and (2) one environmental stakeholder representative. Each representative shall be an employee, board member, group member, or other qualified designated representative of the designated entity and shall have knowledge of the Watershed, the Fishery, and existing water management activities in the Watershed. Appointments to the MC shall be for provisional terms of five (5) years, subject to the discretion of the Bound Party to substitute designees. This means, each member of the MC is

1 subject to re-designation by the Bound Party subject to this provision, a reappointment a
2 minimum of every five (5) years. An Agricultural/Mutual Water Company representative must
3 be a designee of a Bound Party that has produced an amount equal to or greater than an average
4 of one-hundred (100) AFY in the five (5) year period immediately preceding the appointment.
5 The MC, subject to Court oversight, shall be primarily responsible for implementing this Physical
6 Solution.

7

8 **7.7.2 Assessment to Fund Plan Development and Implementation**

9

10 The MC shall adopt an annual budget each year for the purpose of implementing and
11 administering this Physical Solution. Any portion of the budgeted costs not funded by Party
12 grants, third party grants, parcel taxes and benefit assessments will be funded by an assessment
13 levied upon those Parties to the Judgment that produce water in quantities greater than *De*
14 *Minimis*. The MC, no later than one year after the commencement of the Implementation Phase,
15 shall adopt an annual assessment (“**Annual Assessment**”), and shall continue to assess and
16 collect such Annual Assessment for so long as funds may be required for the implementation of
17 the Plan and Physical Solution, subject to adjustment by the MC. Adjustments may be required,
18 necessary, and prudent to account for the availability of funds from sources made available other
19 than by assessment on the Parties. For purpose of funding the Physical Solution only and not as
20 an admission of proportionate, joint, and several responsibility or of the relative quantities of any
21 water rights, the assessment shall be calculated and imposed on each Producer in amount equal to
22 the Producer’s percentage share of total Watershed water production above the *De Minimis* level.

23

24 The MC shall base its Annual Assessment on the five-year average usage of all Producers
25 above *De Minimis*. The budgeted costs to implement the Plan and the Physical Solution shall be
26 apportioned pro rata in an amount equal to each Producer’s percentage share of the total
27 Watershed water production in five-year increments. This means that the initial Annual
28 Assessment will be based upon the use in the five years immediately preceding the

1 commencement of the Implementation Phase and will continue to be the basis for levying
2 assessments during the first five-year period (the “**Producer’s Percentage**”). Thereafter, the
3 Producer’s Percentage shall be recalculated every five years and will be an amount equal to the
4 Producer’s average annual percentage share of the total Watershed water production as measured
5 over the immediately preceding five-year period.

6

7 The Producers are encouraged to propose measures that will reduce the individual and
8 cumulative costs of implementing the Plan and the Physical Solution. The MC shall develop,
9 within six (6) months of its establishment, procedures for Producers to apply for credits as off-
10 sets against the Annual Assessments for verified in-kind contributions that are approved in
11 advance by the MC and implement approved elements of the Plan or actions required by the
12 Physical Solution, including but not limited to Arundo, debris, and trash removal. In addition, the
13 MC shall develop procedures for Producers to apply for credits against the assessment for the
14 development of projects that are not required by the Plan or Physical Solution, but are determined
15 by the MC to materially advance the achievement of the management objectives of the Plan. The
16 MC and the Bound Parties shall also make best efforts to secure additional grant or third-party
17 funding where available and appropriate, for the purpose of implementing the Plan and Physical
18 Solution, and such additional funding shall be used to offset the assessment or shall result in a
19 credit against the assessment for individual parties who obtain such funding.

20

21 In order to insure that sufficient funding exists to implement the Adoption Phase, and
22 subject to subsequent pro-rata reimbursement derived through Annual Assessments levied upon
23 other unnamed Producers, the following Producer parties shall advance funding in excess of their
24 Producer’s Percentage as needed to implement the Adoption Phase based on the following
25 percentages:

26

27

28

Party	Estimated Share of Advanced Adoption Phase Costs⁵
City	18.940%
Casitas	56.500%
VRWD	6.795%
MOWD	3.785%
Rancho Matilija Mutual Water Company	2.935%
Wood-Claeyssens Foundation	7.216%
Other/Agriculture	3.828%

The MC shall develop an equitable process by which the funding advanced by these initial parties during the Adoption Phase shall be reimbursed or credited against future assessments during the Implementation and Adaptive Management Phases. As noted above, however, the City shall be solely responsible for the funding of the Foster Park Passage Improvement Project and all future monitoring costs attributable thereto.

In addition, the MC will exercise good faith in considering and supporting reasonable efforts of any one or more public agencies who may, in their discretion, wish to use their individual powers through existing legal processes to seek to finance some or all of the implementation costs through a special parcel tax or a property-based benefit assessment. The Parties acknowledge that under existing law, a special parcel tax is a tax levied against property within the Watershed, as authorized under article XIII A of the California Constitution, article XIII D, section a(2) of the California Constitution, California Government Code section 37100.5, Government Code section 50075 *et seq.*, and any other provision of law authorizing such public agency to impose a parcel tax (including, for example, the Mello-Roos Community Facilities Act of 1982, Government Code section 53311 *et seq.*). Subject to limitations existing in applicable law authorizing such parcel tax, a public agency may determine a methodology for allocating the costs of watershed management to parcels within the watershed, provided that the parcel tax may

⁵ Based on best available information regarding water usage for the past five (5) years, subject to final participation of Parties and confirmation.

1 not be based on the assessed value of any parcel. A parcel tax may not be levied by any public
2 agency until that tax is submitted to the electorate and approved by a two-thirds vote.
3

4 The Producers further acknowledge that public agencies may also levy a property-based
5 benefit assessment on property within the Watershed. Assessments are subject to the provisions
6 of article XIII D of the California Constitution, and Government Code section 53750 *et seq.*
7 (commonly known as Proposition 218). Assessments may not exceed the proportional specific
8 benefit conferred on any parcel subject to the assessment, and the methodology for allocating
9 such specific benefit in a proportionate manner must be supported by a detailed engineer's report
10 prepared by a registered professional engineer certified by the State of California. Special
11 benefits include benefits to parcels that are distinct and separate from general benefits conferred
12 to the public at large. The public agency may not levy an assessment on property unless the
13 public agency has first held a notified public hearing and balloting proceeding, and received
14 ballots in favor of the assessment from properties subject to the assessment representing a
15 majority of the total amount of the assessment.

16
17 Following the expiration of the eighteen (18) month Adoption Phase, the ten (10) year
18 Implementation Phase, and the first eighteen (18) months of the Adaptive Management Phase
19 (being a total period of fifteen (15) years), a Producer may make application to the MC, and
20 thereafter to the Court, to have the amount of their annual per acre foot assessment derived from
21 their Producer's Percentage reduced by an amount equal to their pro rata share of monitoring
22 costs incorporated into their Producer's Percentage on the grounds that the percolating
23 Groundwater they pump is not hydrologically interconnected to the Ventura River. The Producer
24 making this request bears the burden of proof of demonstrating by a preponderance of the
25 evidence that there is no material hydrologic connection between their pumping of Groundwater
26 and flow in the Ventura River. The reduction is applicable to the cost of monitoring only. The
27 ongoing administrative costs, including legal expenses, incurred by the MC are not subject to this
28

1 provision. The initial demonstration will be made to the MC and reviewable, *de novo*, by the
2 Court.

3

4 This cost allocation methodology provided herein is the result of a compromise for
5 purpose of agreed funding and is not an admission, express or implied, that there is a hydraulic
6 interconnection between percolating Groundwater and water flowing within a known and defined
7 channel of the Ventura River. Moreover, by agreeing to this method of cost-allocation for the
8 purpose of funding the Physical Solution and the Plan, the Producers are expressly reserving all
9 rights, whatever they may be, concerning whether there is a hydrologic interconnection between
10 the Ventura River – including subsurface flow in a known and defined channel – and percolating
11 Groundwater. This reservation includes the Party’s right to oppose further measures not
12 expressly authorized by the Physical Solution and Plan on the grounds there is no actual
13 hydrologic interconnection between the production of percolating Groundwater and the Ventura
14 River and to contest regulatory conditions adopted that are in addition to or in conflict with those
15 expressly set forth in the Physical Solution and the Plan.

16

17 Imposition of the cost allocation methodology provided herein is expressly subject to the
18 condition precedent of the Court ordering the imposition of this Physical Solution and Plan,
19 inclusive of this methodology being binding on all Producers of water from the Watershed in
20 amount greater than or equal to five (5) AFY (non *De Minimis* Producers).

21

22 **7.7.3 Powers and Duties**

23

24 The MC shall carry out its powers, duties, and responsibilities in an impartial manner
25 without favor or prejudice to any Bound Party. Subject to the continuing supervision and control
26 of the Court, the MC shall have and may exercise the following express powers and duties,
27 together with any specific power and duties set forth elsewhere in this Physical Solution or
28 ordered by the Court:

1 **7.7.3.1 Selection of the Technical Advisor**

2 The MC shall select Technical Advisor with the necessary training, experience, and
3 education to provide technical oversight of the implementation and performance of the Plan and
4 make recommendations to the MC.

5

6 **7.7.3.2 Adoption of Rules and Regulations**

7 The MC shall prepare and propose for adoption by the Court appropriate rules and
8 regulations, including conflict of interest rules for MC members. All MC rules and regulations,
9 and any amendments to the MC rules and regulations, shall be consistent with this Physical
10 Solution and are subject to approval by the Court, for good cause shown, after notice to and
11 consideration of the objections of any Bound Party. Before proposing rules and regulations, or
12 amendments thereto, for adoption by the Court, the MC shall hold a public hearing. At least
13 thirty (30) days prior to the date of the hearing, the MC shall send to all Bound Parties notice of
14 the hearing and a copy of the proposed rules and regulations or amendments thereto.

15

16 **7.7.3.3 Consideration and Adoption of the Plan and Amendments to**
17 **the Plan**

18 The MC shall consider and adopt the Plan, as well as any amendments to the Plan.

19

20 **7.7.3.4 Voting Requirements**

21 All decisions of the MC shall be by simple majority of its voting members provided that,
22 to be valid and binding, the following decisions of the MC set forth in Sections 7.7.3.4.1,
23 7.7.3.4.2, and 7.7.3.4.3 must be ratified by either: (i) a 75% vote of the Bound Parties with greater
24 than one hundred (100) AFY annual average water production during the five years immediately
25 preceding the vote (notwithstanding that a Bound Party may have no designee on the MC) or (ii)
26 a volume vote of 80% of the Bound Parties based upon the cumulative production of water in the
27 Watershed that occurred in the five years immediately preceding the vote. The vote will be
28 conducted by written ballot pursuant to rules and regulations promulgated by the MC. For the

1 avoidance of doubt, the presence of the two non-voting ex officio members shall not be counted
2 for purposes of determining whether a quorum exists for MC meetings and actions taken.
3

4 **7.7.3.4.1 Execution of Agreements**

5 Agreements of more than five (5) years in duration or for which the total value of services
6 provided thereunder will exceed \$500,000 unless approved pursuant to Section 7.7.3.4.2 below.
7

8 **7.7.3.4.2 Approval of Proposed Modifications to the**
9 **Implementation and Adaptive Management Measures Set forth in the Physical Solution and**
10 **the Plan**

11 Proposed modifications to the Implementation and Adaptive Management Measures set
12 forth in this Physical Solution and the Plan that: (i) are reasonably likely to result in an increased
13 cost that is subject to recovery from the Bound Parties through an Annual Assessment in an
14 amount greater than five hundred thousand dollars (\$500,000) over the duration of the respective
15 Phase or one million dollars (\$1,000,000) through all Phases or (ii) the abandonment or
16 discontinuance of any habitat improvement measure set forth in the Physical Solution and the
17 Plan.

18 **7.7.3.4.3 Increases in Annual Assessments within a Phase**

19 An increase in the cumulative Annual Assessment within a Phase, not previously
20 approved pursuant to Sections 7.7.3.4.1 or 7.7.3.4.2 above, in an amount greater than twenty
21 percent (20%) over the prior year.
22

23 **7.7.3.5 Employment of Experts and Agents**

24 In addition to the Technical Advisor, the MC may employ, contract with, or otherwise
25 engage such administrative personnel, engineering, biological (fishery), legal, accounting, or
26 other specialty services, and consulting assistants as appropriate to carry out the terms of this
27 Physical Solution.
28

1 **7.7.3.6 Notice List**

2 The MC shall maintain a current list of Bound Parties to receive notice. Each Bound
3 Party shall have an affirmative obligation to provide the MC with their current contact
4 information. Any Person may be added to the MC's notice list by electronic written request.
5 Whenever any parcel of property that is subject to this Judgement is transferred, the grantor of the
6 property shall notify the grantee of the existence of this Physical Solution, and the grantee shall
7 provide the MC with its current contact information.

8 **7.7.3.7 Annual Budget**

9 The MC shall prepare a proposed administrative budget for each year covering all of its
10 operations, including, without limitation, costs of the Technical Advisor and other needed
11 consultants and personnel. The MC shall hold a public hearing regarding the proposed
12 administrative budget and adopt an administrative budget. Following the adoption of the budget,
13 the MC may make expenditures within budgeted items in the exercise of power herein granted, as
14 a matter of course.

15 **7.7.3.8 Unauthorized Actions**

16 The MC shall bring such action or motion as is necessary to enjoin any conduct prohibited
17 by this Physical Solution.

18 **7.7.3.9 Meetings and Records**

19 Although the MC is not a separate public agency, the MC shall generally provide notice of
20 and conduct all meetings and hearings in a manner consistent with the standards and timetables
21 set forth in the Ralph M. Brown Act, Government Code sections 54950 *et seq.*, unless otherwise
22 required by the MC's rules and regulations. The MC shall establish its own website and make its
23 files and records available thereon.

1 **7.7.3.10 Coordination with Groundwater Sustainability Agencies**

2 In implementing its powers and duties, the MC shall coordinate with all GSAs governing
3 the Basins. In accordance with Code of Civil Procedure section 830(b)(4), this Physical Solution,
4 and the MC's activities, are designed in a manner to be, and must be interpreted, consistent with
5 the achievement of Groundwater sustainability within the timeframes of SGMA.

6

7 **7.7.4 Technical Advisor**

8

9 The Technical Advisor shall be appointed by the MC and shall report to the MC and the
10 Court. The Technical Advisor shall have the following duties.

11

12 **7.7.4.1 Monitoring Condition of the *O. mykiss* Population**

13 Monitor the status of the *O. mykiss* population and their habitat using the criteria
14 established in this Physical Solution and in accordance with the Plan.

15

16 **7.7.4.2 Monitoring Implementation of Required Management
17 Measures**

18 Monitor the implementation of the Fishery management and water management measures
19 required by this Physical Solution.

20

21 **7.7.4.3 Measuring Devices**

22 Propose to the MC the installation of any additional measuring devices to monitor the
23 condition of the *O. mykiss* population, water quality, instream flows and water surface elevations,
24 or to measure water Production in the Watershed.

25

26 **7.7.4.4 Production Reports; Current Production Baseline**

27 Require each Producer of water from the Watershed, other than *De Minimis* Producers,
28 and every Bound Party that claims a right to Produce water within the Ventura River Watershed,

1 inclusive of surface water, subterranean streams flowing in known and definite channels, and
2 percolating Groundwater from the Basins in a quantity equal to or greater than five (5) AFY to
3 file an annual **Production Report** with the MC, in a form, to be developed and promulgated by
4 the Technical Advisor, consistent with Water Code section 4999 *et seq.* and shall demonstrate
5 water use over a minimum period of ten (10) years prior to the Production Report. Production
6 Reports will be filed under penalty of perjury and will be conclusive proof of the maximum
7 quantity of water applied for beneficial use by the party under any claim of right in any future
8 evidentiary proceeding. The failure to file a Production Report shall be considered non-use for
9 that Producer/Bound Party for any such year consistent with Water Code section 5004. The
10 timing of filing Production Reports shall be coordinated with the GSAs in the Watershed to avoid
11 duplication.

12

13 *De Minimis* Producers shall file an annual report under penalty of perjury pursuant to
14 Section 7.7.4.6 below sufficient to demonstrate that they qualify as *De Minimis* Producers. *De*
15 *Minimis* Producers may also elect to file annual Production Reports with the MC to document
16 their historical water Production.

17

18 Non-Producers owning inactive Production wells shall file with the MC evidence of their
19 inactive Production well status on a form to be developed and promulgated by the Technical
20 Advisor. Non-Producers claiming an unexercised right to Produce water from the Watershed
21 may also elect to provide the MC with evidence of such a claim. In evaluating notices of **New**
22 **Production**, the MC shall consider such prior claims filed with the MC.

23

24 The Technical Advisor shall also pursue State Board designation in accordance with
25 Water Code section 5009 such that Producers must only file Production Reports with the MC. In
26 addition, the Technical Advisor shall prepare an annual inventory of all water Production in the
27 Watershed using Production Reports and other reports submitted pursuant to the Physical
28 Solution, and/or previous reports to the State Board, DWR, Ojai GMA, or otherwise pursuant to

1 Water Code section 5009, including an estimate of the quantity of water Produced by *De Minimis*
2 Producers and a summary of reports by Non-Producers. This inventory shall be updated annually
3 and included within the Annual Report. The Technical Advisor shall also analyze this inventory
4 on annual basis and provide notice to the MC if there are any material increases in Production by
5 any Producer.

6

7

7.7.4.5 New Production

8 Any Bound Party or Non-Producer seeking to commence New Production from the
9 Watershed, and before seeking a Production-related (e.g., new well or appropriative water right)
10 permit from any applicable local or state authority, shall give notice to the Technical Advisor of
11 the proposed New Production on a form to be developed and promulgated by the Technical
12 Advisor. Upon recommendation from the Technical Advisor, the MC shall evaluate whether the
13 commencement of proposed New Production unreasonably interferes with the Physical Solution,
14 complies with the reasonable and beneficial use mandates of Article X, section 2 of the California
15 Constitution, and is protective of the public trust. The MC may impose reasonable mitigation or
16 other requirements on the proposed New Production to ensure that it is consistent with the
17 Physical Solution, the reasonable and beneficial use mandates of Article X, section 2 of the
18 California Constitution, and protective of the public trust. Any decision of the MC regarding the
19 New Production is subject to judicial review pursuant to the Court's continuing jurisdiction
20 pursuant to Section 7.7.6 below.

21

22

7.7.4.6 *De Minimis* Producer

23 A *De Minimis* Producer shall be defined as any existing and New Production that is
24 limited to less than five (5) AFY. To qualify as a *De Minimis* Producer, a Producer shall file an
25 annual *De Minimis* production report with the MC, in a form consistent with Water Code section
26 4999 *et seq.*, under penalty of perjury. The Technical Advisor shall develop and promulgate
27 simple forms and procedures for *De Minimis* production reports.

28

1 **7.7.4.7 Diversion of Flow**

2 No Bound Party shall undertake or cause construction within the Watershed that will
3 materially reduce the amount of storm flows that would otherwise enter the Watershed, or
4 adversely affect the Baseline Conditions identified in the Plan and Section 7.2 of this Physical
5 Solution, without prior notification to and evaluation for consistency with the Physical Solution,
6 compliance with reasonable and beneficial use requirements, and protection of the public trust by
7 the Technical Advisor. The Technical Advisor may preapprove types of infiltration projects that
8 are consistent with the goals of this Physical Solution.

9 **7.7.4.8 Data, Estimates, and Procedures**

10 The Technical Advisor shall rely on and use the best available science, records and data to
11 support the implementation of this Physical Solution. Where actual records or data are not
12 available, the Technical Advisor shall rely on and use sound scientific and engineering estimates.
13 The Technical Advisor may use preliminary records of measurements, and, if revisions are
14 subsequently made, may reflect such revisions in subsequent accounting.

15 **7.7.4.9 Status Reports**

16 **7.7.4.9.1 Contents of the Annual Report**

17 The Technical Advisor shall prepare a report annually (“**Annual Report**”) that includes
18 information on the activities of the MC and information sufficient to document the status of the
19 *O. mykiss* population, as set forth in this Physical Solution, and specifically in the Management
20 Plan. The Annual Report shall include at least the following information: (a) summary of the
21 MC’s activities; (b) fiscal report of the preceding year’s operations, including revenue and
22 expenditures; (c) the general condition of the Fishery and the Watershed as compared to Baseline
23 Conditions; (d) a summary of Watershed management measures implemented in the preceding
24 year; (e) production reports for the Watershed; (f) evaluation of any notices of New Production;
25 and (g) any other information necessary to assess implementation of the Physical Solution and to
26 comply with the requirements of the Management Plan.

1 **7.7.4.9.2 Long Term Reporting**

2 The Technical Advisor shall prepare and file at the end of the Implementation Phase, a
3 report with long-term monitoring trends and a comprehensive evaluation of the state of the
4 Watershed. Subsequent state of the Watershed long range reports shall be filed as to be
5 determined by the MC (“**Long Term Report**”).

6

7 **7.7.4.9.3 Filing of Reports**

8 The Technical Advisor shall prepare and file the Annual Report or Long Term Report
9 (collectively, “**Status Reports**”), whichever is applicable, with the Court each year, on a date to
10 be determined by the MC, beginning with an Annual Report filed following the first full year
11 after entry of this Physical Solution. Prior to filing a Status Report with the Court, the MC shall
12 provide written notice to all Bound Parties that a draft of the Status Report is available for review
13 and make the Status Report available on a web site available to all Bound Parties. The MC shall
14 provide written notice to all Bound Parties of a public hearing to receive comments and
15 recommendations for changes in the Status Report. The public hearing shall be conducted
16 pursuant to rules and regulations promulgated by the MC. The notice of public hearing may
17 include such summary of the draft Status Report as the MC may deem appropriate.

18

19 **7.7.5 Removal of the MC**

20

21 The Court retains and reserves full jurisdiction, power, and authority to remove the MC,
22 or any individual representative serving on the MC, for good cause, and to substitute a new MC
23 or representative in its place, upon its own motion or upon motion of any Bound Party in
24 accordance with the notice and hearing procedures set forth in Section 7.7.6 of this Physical
25 Solution. The Court shall find good cause upon a showing that the MC or representative has: (1)
26 failed to exercise its powers or perform its duties; (2) performed its powers in a biased manner; or
27 (3) otherwise failed to act in a manner consistent with the provisions in this Physical Solution or
28 subsequent order of the Court.

1 **7.7.6 Court Review of MC Actions**

2
3 Any action, decision, rule, regulation, or procedure of the MC or the Technical Advisor
4 pursuant to this Physical Solution shall be subject to review by the Court on its own motion or on
5 the timely motion by any Bound Party as follows:

6
7 **7.7.6.1 Effective Date of MC Action**

8 Any order, decision or action of MC or Technical Advisor pursuant to this Physical
9 Solution shall be deemed to have occurred on the date of the order, decision or action.

10
11 **7.7.6.2 Notice of Motion**

12 Any Bound Party may move the Court for review of an action or decision pursuant to this
13 Physical Solution by way of noticed motion, upon at least 30 days' notice thereof. The motion
14 shall be served on all Bound Parties and the MC and Technical Advisor. Unless ordered by the
15 Court on its own motion or by request by a Bound Party, any such petition shall not operate to
16 stay the effect of any action or decision which is challenged. To have standing to bring such a
17 motion, a Bound Party must have received notice of and participated in the proceedings of the
18 MC regarding the order, decision or action in question or make an adequate showing as to why
19 such participating was impractical or futile.

20
21 **7.7.6.3 Time for Motion**

22 A Bound Party must file a motion to review any action or decision within ninety (90) days
23 after such action or decision, except that motions for review of assessments hereunder shall be
24 filed within thirty (30) days of MC mailing notice of the assessment.

25
26 **7.7.6.4 Standard of Review**

27 The Court's review of any legal determinations of the MC, including but not limited to
28 interpretations of this Physical Solution, shall be *de novo*. The factual determinations of the MC

1 shall be reviewed under a substantial evidence standard, provided, however, that any factual
2 determinations that involve or affect a Bound Party's vested fundamental rights, directly or
3 otherwise, shall be reviewed *de novo*. For the purpose of this Physical Solution, such vested
4 fundamental rights shall include the rights to produce, divert, receive, or use water.

5

6 **7.7.6.5 Decision**

7 The decision of the Court in such proceeding shall be an appealable supplemental order in
8 this case. When the Court's decision is final, it shall be binding upon the MC and the Bound
9 Parties.

10

11 **7.8 Dispute Resolution**

12 Except as discussed herein, all disputes arising under this Physical Solution, including
13 those related to the condition of the Fishery, initially shall be submitted to the MC for resolution
14 in accordance with this section. Any Bound Party may file a written request with the MC to hold
15 a hearing on a dispute. Upon receipt of the written request, the MC shall provide notice that
16 generally describes the nature of the dispute by posting it on its website. Thereafter, the MC shall
17 cause an item to be placed on the agenda for a regularly-scheduled meeting of the MC within
18 forty-five (45) days or, or if requested by the moving party, call a special meeting for the purpose
19 of providing a full hearing of the dispute and providing the interested Bound Parties with notice
20 and opportunity to be heard. No later than thirty (30) days following the conclusion of the
21 hearing(s), the MC shall issue a written decision that is dispositive of the dispute and that is
22 supported by written findings. The written decision may include additional adaptive management
23 provisions, including but not limited to, including any combination of water management and
24 habitat improvement measures sufficient to establish the Fishery as in Good Condition in
25 accordance with this Physical Solution. Any Bound Party may seek review of an adverse
26 decision of the MC in accordance with the provisions of Section 7.7.6. This section does not
27 apply to any dispute wherein any Party seeks a determination of the relative priority rights to
28 water in the Watershed or to establish a comprehensive adjudication of water rights in the

1 Watershed. Any such disputes shall be resolved solely by the Court pursuant to and accordance
2 with Section 9.2 herein.

3

4 **7.9 Need for Flexibility**

5 This Physical Solution must provide flexibility and adaptability to allow the MC and the
6 Court to use existing and future technological, social, institutional, and economic options in order
7 to maximize reasonable and beneficial water use in the Watershed.

8

9 **8. FINDINGS**

10 The Court finds that the Physical Solution: (a) is compelled by the need to maximize the
11 efficient reasonable and beneficial use of all water in the Watershed and avoid the waste of
12 precious water resources and continued uncertainty created by unresolved competing claims to
13 water in furtherance of the mandates of the State Constitution and State water policy; (b) is not
14 expected to result in substantial injury to water right holders or beneficial uses; (c) is a fair and
15 equitable basis for satisfying the reasonable and beneficial water uses within the Watershed,
16 including consumptive and instream uses; (d) provides due consideration of and respects common
17 law and statutory water right priorities and applicable public trust resources; and (e) avoids
18 depletions of interconnected surface water that have significant and unreasonable adverse impacts
19 on beneficial use of surface water. The Court finds that the Physical Solution is a legal, practical,
20 and implementable means for making the maximum reasonable and beneficial use of the waters
21 within the Watershed.

22

23 The Court finds, in accordance with Code of Civil Procedure section 830(a)(4), that this
24 Physical Solution is consistent with the achievement of Groundwater sustainability within the
25 timeframes of SGMA. Specifically, GSPs are designed to attain sustainability by avoiding
26 “undesirable results.” Water Code section 10721 defines “undesirable results” as including
27 “depletions of interconnected surface water that have significant and unreasonable adverse
28 impacts on beneficial uses of surface water.” Because the imposition of the Physical Solution

1 will coordinate actions by water right holders in a manner that avoids adverse impacts to
2 beneficial uses of surface water, it will assist in the avoidance of undesirable results and in the
3 development and implementation of GSPs.

4

5 The Court has considered existing water management plans and programs, and also finds
6 that the Physical Solution is consistent with the water management and conservation goals
7 contained in the following Water Management Plans:

- 8
- 9 • The March 2015 Ventura River Watershed Management Plan adopted by the
10 Ventura River Watershed Council, available at <http://venturawatershed.org/the-watershed-plan>.
 - 12
 - 13 • Groundwater Management Plan – 2018 Update, Ojai Valley Groundwater Basin
14 adopted by the Ojai Basin Groundwater Management Agency, available at
15 <http://obgma.com/wp-content/uploads/2018/09/OBGMA-GMP-2018-Update-Final-8-30-18s.pdf>.
 - 17

18 Pursuant to Water Code section 10737.8, the Court finds that this Physical Solution will
19 not substantially impair the ability of a GSA, the State Board, or DWR to comply with SGMA to
20 achieve sustainable Groundwater management. Pursuant to Water Code section 10737.2, the
21 Court finds that this Action has been managed in a manner that minimizes interference with the
22 timely completion and implementation of GSPs for the Basins, avoids redundancy and
23 unnecessary costs in the development of technical information and a physical solution, and is
24 consistent with the attainment of sustainable Groundwater management within the timeframes
25 established by SGMA.

26

27 Pursuant to Code of Civil Procedure section 850(a)(1)-(3), the Court finds that this
28 Physical Solution: (1) is consistent with Article X, section 2 of the California Constitution; (2) is

1 consistent with the water right priorities of all non-stipulating Parties and any Persons who have
2 claims that are exempted by this Physical Solution; and (3) treats all objecting Parties and any
3 Persons who have claim that are exempted equitably as compared to the stipulating Parties. This
4 Physical Solution provides flexibility and adaptability to accommodate existing and future
5 technological, social, institutional, and economic options under the Court's continuing
6 jurisdiction to maximize reasonable and beneficial water use without significant and unreasonable
7 harm to public trust resources. Although this Physical Solution is not a determination of the
8 Bound Parties' relative water rights, the Physical Solution establishes a requirement that all water
9 use must be undertaken consistent with the Physical Solution and the management measures that
10 will ensure the availability of water for consumptive uses, regardless of water right, while
11 simultaneously maintaining the Fishery in Good Condition and for the protection of public trust
12 resources as provided herein consistent with *National Audubon Society v. Superior Court* (1983)
13 33 Cal.3d 419. However, while the quantification of individual rights and declaration of relative
14 priorities among Bound Parties is not needed at the present time, it is expressly reserved, without
15 prejudice for future determination as may be required by the Court at a later date, as necessary to
16 maintain and implement the Physical Solution or as may be requested by a Party upon a showing
17 that the Physical Solution is injurious to a Party's water right, the priority of that right, or for
18 other good cause. The Court reserves its discretion within its continuing jurisdiction to issue
19 further orders in furtherance of the Physical Solution including the quantification of use and
20 declaration of relative rights among some or all of the Bound Parties.

21
22 Through this Physical Solution, the Bound Parties are obligated to implement the
23 Management Plan that is designed to maintain the Southern California Steelhead population
24 inhabiting the Ventura River Watershed in Good Condition, consistent with Article X, section 2
25 of the California Constitution and the public trust doctrine. The Bound Parties will implement
26 this obligation through the Physical Solution to manage the steelhead population described below.
27 The Physical Solution is based on the existing scientific literature addressing steelhead in the
28

1 Watershed, including information contained in the Report, and the following reach-by-reach
2 assessment of the Watershed.

3

4 **9. ENFORCEMENT**

5 **9.1 Production in Compliance with Physical Solution**

6 Each and every Bound Party, its officers, directors, agents, employees, successors, and
7 assigns is enjoined and restrained from Producing water from the Watershed except in accordance
8 with the requirements of this Physical Solution, and from otherwise violating the terms of this
9 Physical Solution.

10

11 **9.2 Continuing Jurisdiction**

12 The Court retains and reserves full jurisdiction, power, and authority for the purpose of
13 enabling the Court, upon motion of a Bound Party, to make such further or supplemental order or
14 direction as may be necessary or appropriate to interpret, enforce, administer, or carry out this
15 Physical Solution and Judgment, and to provide for such other matters as are not contemplated by
16 this Physical Solution and Judgment, which might occur in the future, and which if not provided
17 for would defeat the purpose of this Physical Solution and Judgment. The quantification of
18 individual rights and declaration of relative priorities among the Bound Parties is expressly
19 reserved, without prejudice, for future determination as may be required by the Court at a later
20 date, as necessary to maintain and implement the Physical Solution and Judgment. Upon a
21 showing to the Court demonstrating that good cause exists, e.g. that the Parties' efforts to bring
22 the Fishery into Good Condition through the Physical Solution have been unsuccessful, the Court
23 reserves continuing jurisdiction to require the quantification of use and declaration of rights
24 among some or all Bound Parties under the City's first, second, third, fourth, fifth, seventh,
25 eighth, and/or ninth claims for relief. The Court further reserves its authority to establish all
26 processes and procedures necessary for the determination of the relative priority rights to water in
27 the Watershed or for an adjudication of water rights in the Watershed among some or all Bound
28

1 Parties, and the Court further retains jurisdiction to amend the Physical Solution and Judgment as
2 is necessary.

3

4 **10. MISCELLANEOUS PROVISIONS**

5 **10.1 Actions Not Subject to CEQA**

6 Nothing in this Physical Solution, or in the implementation thereof, or the decisions of any
7 entity acting under the authority of this Physical Solution, including the MC, shall be deemed a
8 “project” subject to the California Environmental Quality Act (“CEQA”). (See e.g., *California*
9 *American Water v. City of Seaside* (2010) 183 Cal.App.4th 471, and *Hillside Memorial Park &*
10 *Mortuary v. Golden State Water Co.* (2011) 205 Cal.App.4th 534). No Board, committee, or
11 entity formed pursuant to this Physical Solution shall be deemed a “public agency” subject to
12 CEQA. (See Public Resources Code §21063.)

13

14 **10.2 Designation for Notice and Service**

15 Each Bound Party shall designate a name, address, and email address to be used for
16 purposes of all subsequent notices and service herein, either by its endorsement on this Physical
17 Solution or by a separate designation to be filed within thirty (30) days after entry of this Physical
18 Solution. A Bound Party may change its designation by filing a written notice of such change
19 with the MC. If no designation is made, a Bound Party’s designee shall be deemed to be, in order
20 of priority: i) the Bound Party’s attorney of record; ii) if the Bound Party does not have an
21 attorney of record, the Bound Party itself at the address specified on the MC’s list.

22

23 **10.3 Transfer of Real Property**

24 Any Bound Party transferring any real property subject to this Physical Solution shall
25 notify the transferee of the existence of the Physical Solution and its binding effect on the real
26 property; provide grantee with a copy of the Physical Solution; and notify the MC of the transfer
27 and file a written notice of transfer within ten (10) days after the transfer of the real property,
28 stating the name, address, email address, and other contact information of the transferee.

1 Transferee shall become a Bound Party, and if necessary, City shall substitute the transferee as
2 Cross-Defendant pursuant to Code of Civil Procedure section 368.5.

3

4 **10.4 Service of Documents**

5 Unless otherwise ordered by the Court, delivery to or service to any Bound Party by the
6 Court or any Bound Party of any document required to be served upon or delivered to any Bound
7 Party pursuant to this Physical Solution shall be deemed made if by electronic service. All
8 notices or service of documents pursuant to this Physical Solution by MC or any Bound Party will
9 be made by electronic mail to the greatest extent feasible.

10

11 **10.5 No Abandonment of Rights**

12 In the interest of the Watershed, and consistent with the principles of reasonable and
13 beneficial use, and the public trust, no Bound Party shall use more water than is reasonably
14 required. Failure to use all of the water from the Watershed to which a Bound Party is entitled
15 shall not, in and of itself, be deemed or constitute an abandonment of such Bound Party's right, in
16 whole or in part

17

18 **10.6 Intervention after Entry of Physical Solution**

19 Any Person who is not a Bound Party or successor to a Bound Party and who proposes to
20 produce water from the Watershed, other than the federal government, is required to seek to
21 become a Party subject to this Physical Solution through a noticed motion to intervene in this
22 Physical Solution prior to commencing any Production. Thereafter, if approved by the Court,
23 such intervenor shall be a Bound Party in this Physical Solution.

24

25 **10.7 Physical Solution Binding on Successors**

26 Subject to the specific provisions contained in this Physical Solution, this Physical
27 Solution applies to and is binding upon, and inures to the benefit of the Bound Parties to this
28 Action and all their respective heirs, successors-in-interest, and assigns.

1 **10.8 Costs and Fees**

2 Except subject to any existing court orders, each Bound Party shall bear its own costs and
3 attorney's fees arising from the Action.

5 **10.9 Heading and Section References**

6 Captions and headings appearing in this Physical Solution are inserted solely as reference
7 aids for ease and convenience; they shall not be deemed to define or limit the scope or substance
8 of the provisions they introduce, nor shall they be used in construing the intent or effect of such
9 provisions.

11 **10.10 No Third Party Beneficiaries**

12 There are no intended third party beneficiaries of any right or obligation of the Bound
13 Parties.

15 **10.11 Severability**

16 Except as specifically provided herein, the provisions of this Physical Solution are not
17 severable.

19 **10.12 Cooperation and Further Acts**

20 The Bound Parties shall fully cooperate with one another and shall take any additional
21 acts or sign any additional documents as may be necessary, appropriate or convenient to attain the
22 purposes of this Physical Solution.

24 **10.13 Exhibits and Other Writings**

25 Any and all exhibits, documents, instruments, certificates or other writing attached hereto
26 or required or provided for by this Physical Solution, shall be part of this Physical Solution and
27 shall be considered set forth in full at reach reference thereto in this Physical Solution.

1 **10.14 No Limitation on Statutory Authority.**

2 Other than as expressly set forth herein, the Physical Solution will not be construed to
3 affect or limit the authority of any Bound Party to fulfill its statutory, regulatory, or contractual
4 responsibilities under applicable law.

Exhibit A – Defined Terms

Exhibit A

1 **Defined Terms**

- 2 1. **Action**. The Comprehensive Adjudication of the Ventura River Watershed, Los
3 Angeles Superior Court Case No. 19STCP01176.
- 4 2. **Adaptive Management Phase**. The period commencing after the expiration of
5 the Implementation Phase.
- 6 3. **Adoption Phase**. The period commencing after the Court enters Physical Solution
7 and concluding when the Plan is adopted, which shall be no later than eighteen
8 (18) months after entry of the Physical Solution unless otherwise extended by the
9 Court upon motion of any Party for good cause shown.
- 10 4. **Adoption Phase Requirements**. The actions required to be taken by the Parties
11 during the Adoption Phase as described further in Section 7.4.1 of this Physical
12 Solution.
- 13 5. **AFY**. Acre feet per year.
- 14 6. **Amended Cross-Complaint**. The City's Third Amended Cross-Complaint as
15 thereafter amended in this Action.
- 16 7. **Annual Assessment**. Annual assessment adopted by the MC collected as long as
17 funds are required for the implementation of the Plan and Physical Solution.
- 18 8. **Annual Report**. The Annual Report prepared by the Technical Advisor to be
19 filed with the Court, as more particularly described in Section 7.7.4.9 of this
20 Physical Solution.
- 21 9. **Arundo**. Arundo donax.
- 22 10. **Baseline Conditions**. The current condition of each reach of the River at the time
23 of this Physical Solution or as amended hereafter, as more particularly described in
24 Section 7.2 of this Physical Solution.
- 25 11. **Basins**. The Lower Ventura River Basin, the Upper Ventura River Basin, the Ojai
26 Valley Basin, and the Upper Ojai Valley Basin, as more particularly described in
27 Section 4.3 of this Physical Solution.

- 1 12. **Bound Parties.** The Parties and property bound by this Physical Solution and
2 their successors. This includes persons served a summons or a notice, owners of
3 real property overlying the Basins, the State Water Resources Control Board, the
4 California Department of Fish and Wildlife, Santa Barbara Channelkeeper, and
5 any other Person joining this adjudication.
- 6 13. **Casitas.** Cross-Defendant Casitas Municipal Water District.
- 7 14. **Casitas Biological Opinion.** An opinion issued by the National Marine Fisheries
8 Service for operation of the Robles Diversion and Fish Passage Facility.
- 9 15. **Casitas License.** The license issued by the State Board for operation of the
10 Robles Diversion and Fish Passage Facility.
- 11 16. **CEQA.** The California Environmental Quality Act, Public Resources Code,
12 section 21000, *et seq.*
- 13 17. **Cfs.** Cubic feet per second.
- 14 18. **Channelkeeper.** Plaintiff Santa Barbara Channelkeeper.
- 15 19. **City.** Defendant and Cross-Complainant City of San Buenaventura.
- 16 20. **City Settlement.** The settlement agreement executed by Channelkeeper and the
17 City on September 30, 2019, as amended on August 20, 2020.
- 18 21. **Complaint.** The Complaint and Petition for Declaratory Relief and a Writ of
19 Mandate filed by Channelkeeper in the County of San Francisco Superior Court
20 (Case No. CPF-14-513875), and as thereafter amended in this Action.
- 21 22. **Comprehensive Adjudication Statutes.** Code of Civil Procedure sections 830
22 through 852.
- 23 23. **Conditional Waiver.** The Conditional Waiver of Waste Discharge Requirements
24 for Discharges from Irrigated Lands in the Los Angeles Region.
- 25 24. **Cross-Defendants.** Those Parties named as defendants in the Amended Cross-
26 Complaint and those Persons who filed an answer to the Amended Cross-
27 Complaint.

25. **De Minimis** Producer or Production. Any existing or New Production that is limited to less than five (5) AFY.
26. **Department**. The California Department of Fish and Wildlife.
27. **DWR**. The California Department of Water Resources.
28. **Endangered Species Act**. The Endangered Species Act, 16 U.S.C. section 1531, et seq.
29. **ESU**. The Southern California Steelhead Evolutionarily Significant Unit listed as endangered under the federal Endangered Species Act in 1997.
30. **Fishery**. The Southern California Steelhead population in the Ventura River Watershed.
31. **Good Condition**. The condition of the Fishery in the Watershed when the qualitative individual, population, and community conditions described in the Physical Solution and in the Plan are being achieved.
32. **Groundwater**. Water beneath the surface of the earth within the zone below the water table in which the soil is completely saturated with water, but not including water that flows in known and definite channels.
33. **GSA**. Groundwater Sustainability Agency as that term is defined in Water Code section 10721(j).
34. **GSP**. Groundwater Sustainability Plan as that term is defined in Water Code section 10721(k).
35. **Historical Flow Conditions**. Flows in the Watershed in the pre-development period generally before 1958 as determined from gages at Foster Park (gage 8500), San Antonio Creek (gage 7500), and North Fork Matilija Creek (gage 6000).
36. **Implementation Phase**. The period commencing after adoption of the Plan and concluding ten years thereafter.
37. **Implementation Phase Requirements**. The actions required to be taken by the Parties during the Implementation Phase as described further in Section 7.4.2 of this Physical Solution.

- 1 38. **Judgment.** The Judgment entered by the Court in this Action that imposes the
2 Physical Solution.
- 3 39. **Long Term Report.** The report prepared by the Technical Advisor to be filed
4 with the Court, as more particularly described in Section 7.7.4.9 of this Physical
5 Solution.
- 6 40. **Lower Ventura River Basin.** The Groundwater Basin designated as Number 4-
7 302 by DWR Bulletin 118 and as more particularly described in Section 4.3.1 of
8 this Physical Solution.
- 9 41. **MC.** The Management Committee, which is a five member board composed of
10 one representative each from the (1) City, (2) Casitas, (3) the Special District
11 Group (consisting of rotating members of VRWD and MOWD), (4) the
12 Agricultural/Mutual Water Company Group (as they may designate in their
13 discretion) and (5) the Groundwater Sustainability Agency Group (consisting of
14 rotating members of the Upper Ventura River Groundwater Sustainability Agency
15 and Ojai Basin Groundwater Management Agency). There shall be two non-
16 voting ex officio members of the MC composed of (1) one representative from the
17 County of Ventura and (2) one environmental stakeholder representative. Each
18 representative shall be an employee, board member, group member, or other
19 qualified designated representative of the designated entity and shall have
20 knowledge of the Watershed, the Fishery and existing water management activities
21 in the Watershed. The MC, subject to Court oversight, shall be primarily
22 responsible for causing the Parties to implement this Physical Solution.
- 23 42. **Management Plan or Plan.** The Management Plan described in Section 7.3 of
24 this Physical Solution.
- 25 43. **MOWD.** The Meiners Oaks Water District.
- 26 44. **New Production.** Any Production from the Watershed by a Person who did not
27 Produce water from the Watershed prior to January 2, 2020.

- 1 59. **Status Reports.** The Annual Report and Long Term Reports prepared by the
2 Technical Advisor to be filed with the Court, as more particularly described in
3 Section 7.7.4.9 of this Physical Solution.
- 4 60. **Technical Advisor.** The advisor selected by the MC with the necessary training,
5 experience, and education to provide technical oversight of the implementation
6 and performance of the Fishery management program outlined in this Physical
7 Solution and to make recommendations to the MC.
- 8 61. **Uncontrollable Conditions.** Any circumstance beyond the Parties' control,
9 including without limitation, any act of God, war, fire, earthquake, flood,
10 windstorm, drought or natural catastrophe, including climate change; the need to
11 provide a minimum amount of reasonable and beneficial consumptive use of water
12 from the Watershed; criminal acts; civil disturbance, vandalism, sabotage, or
13 terrorism; restraint by court order or public authority or agency; or action or non-
14 action by, or inability to obtain the necessary authorizations or approvals from any
15 governmental agency.
- 16 62. **Upper Ojai Valley Basin.** The Groundwater Basin designated as Basin Number
17 4-1 in DWR's Bulletin 118 and as more particularly described in Section 4.3.4 of
18 this Physical Solution.
- 19 63. **Upper Ventura River Basin.** The Groundwater Basin designated as Basin
20 Number 4-3.01 in DWR's Bulletin 118 and as more particularly described in
21 Section 4.3.2 of this Physical Solution.
- 22 64. **VCAILG.** The Ventura County Agricultural Irrigation Lands Group.
- 23 65. **VRWD.** The Ventura River Water District.
- 24 66. **WAP.** California's Water Action Plan.
- 25 67. **Watershed or Ventura River Watershed.** The entire Ventura River and its
26 tributaries, as well as the Basins.
